You Get the Finest Plants at Rosedale's Nurseries

AZALEAS - Spring Bloom

These truly gorgeous shrubs are the showiest of all flowering plants we list—the entire plant being ablaze with color, in one burst each spring from January to April. Give them an acid soil rich in or entirely composed of peat or oak leaf mold. They like light shade and are especially fine under tall branched trees, where a moderate but constant supply of water is possible. Once the bloom is over the foliage and new growth is neat and pleasing for the remainder of the year.

INDICA AZALEAS

Indica Azaleas are the choicest of all because their flowers are so large and lovely, often 2 inches and more across, sometimes daintily doubled.

Paul Schame. The most popular of all—stocks have never been large enough to meet the demand. Flowers truly lovely, double, rich salmon-rose, very large and showy. **\$2.00 to \$6.00.**

Pink Pearl. Large delicate pink flowers. Very lovely. **\$2.00 to \$6.00.**

Triumph. One of the loveliest Indicas with fully double deep cyclamen purple flowers, often 3 inches across, the petals daintily twisted. We have seen many of these in bloom by Christmas time without forcing. **\$2.00 to \$6.00.**

Vervaeneana alba. Double pure white flowers. **\$2.00 to \$6.00.**

Vervaeneana variegated. Large ruffled flowers, white with pink splotches and markings. **4" \$1.00, 5" \$1.50, 8" \$4.00.**

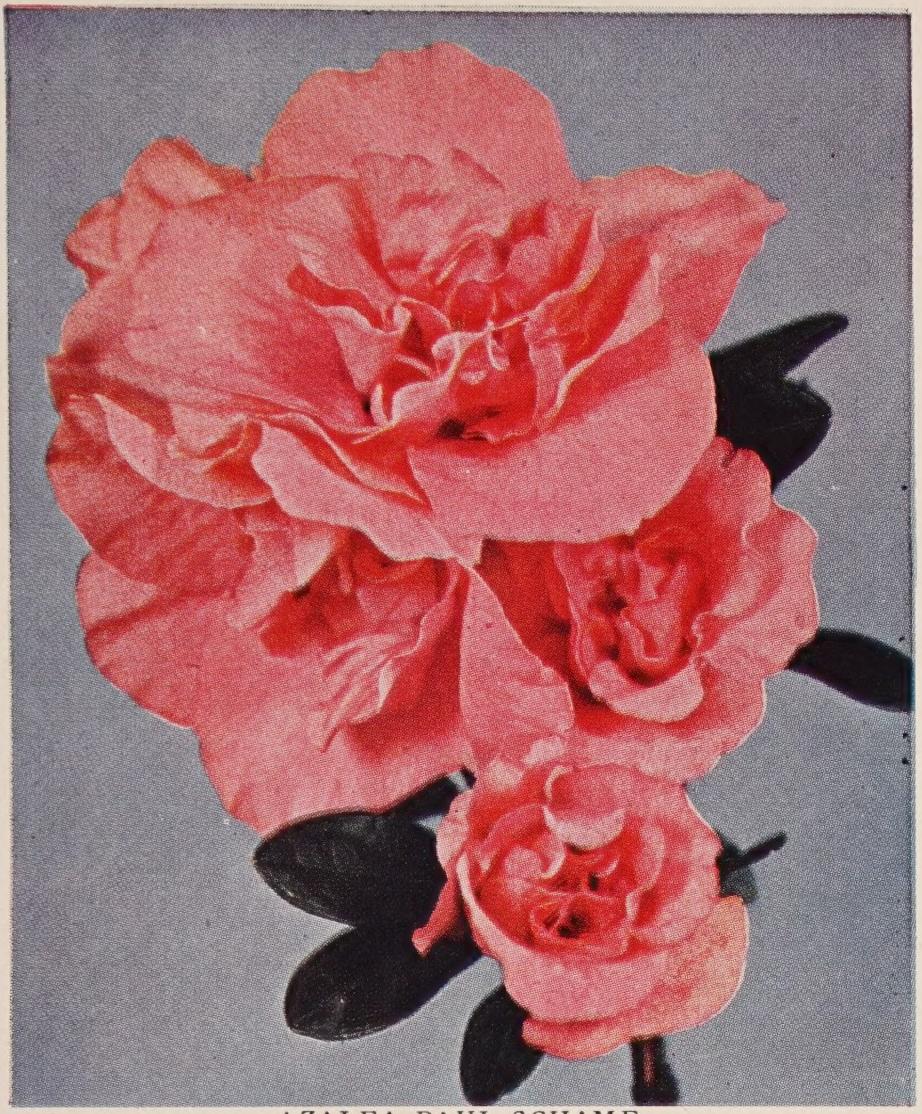

Vanderkruyssen. Double flowers of clear salmon-pink. **\$2.00 to \$6.00.**

Strawberry Tree

Arbutus unedo. Strawberry Tree, a shrub, gets its name from the bright red fruits which look like strawberries. Flowers are tiny white bells in graceful sprays and these cover the well-foliaged shrub in spring—sometimes at the same time the fruits are showing. Although it is one of the longest lived ornamentals, it is likewise very slow growing and the foliage is so dark and sombre that care must be used in placing it. Sun or shade. **Gal. 70c, 5-gal. \$2.85.**

Shrimp Plant

Beloperone tomentosa. Usually about 4 feet tall with the appearance of being a perennial, this shrub is most unique. The flowers which seem to last indefinitely, are made of terra cotta colored scales or bracts, curled in such a way and enveloping one another as to look like a shrimp. For sun or light shade, even as a pot plant for the conservatory—for your friends in cold climates. **Gal 70c, 5-gal. \$2.85.**

AZALEA PAUL SCHAME

Gold Dust Plant

Aucuba japonica variegata. For open ground or in ornamental tubs or jardinières where ornamental foliage is needed, Aucuba is best, particularly if the situation is somewhat shaded. Leaves about 5 inches long, by 2 inches wide, thick, deep green with many gold-like speckles over the surface—very interesting and ornamental. **Gal. 90c, 5-gal. \$3.50.**

Rice Paper Plant

Aralia sieboldi. An unusual shrub consisting of only one to several stiff thick stems that support beautiful tropical-like leaves on long leaf-stems. Sun. **Gal. 70c, 5-gal. \$2.85.**

Natal Plum

Carissa grandiflora. Natal Plum deserves special consideration as an ornamental. Its deep green, glossy healthy foliage, fragrant, chaste white flowers and red plum-like fruits give satisfaction the year around. It is hardy, stands abuse although the sharp spines concealed under the leaves make it an excellent barrier even with its low height of 4 feet. Sun or shade. **Gal 70c, 5-gal. \$2.85.**

Albatross Bouvardia

Bouvardia Albatross. This is the newest and finest of all Bouvardias. The flowers are immense, often 4 inches long, with waxy petals expanding an inch or more, the whole pure white. Deep green foliage, lovely fragrant blossoms. Ultimate height, probably 3 or 4 feet, but of such quality as to deserve a choice place in any home planting. Sun or part shade. **Gal. 95c, 5-gal. \$3.50.**

Candollea

Candollea cuneiformis. Excellent neat growing shrub with deep green small leaves and reddish stems. The lovely clear yellow flowers are about an inch across, cover the shrub in season. Give a sunny exposure. **Gal. 75c, 5-gal. \$3.50.**

CANDOLLEA CUNEIFORMIS

Rosedale's Evergreen Flowering Shrubs

By far the largest group of ornamentals for Southern California, the Evergreen flowering group are also among the most popular. By retaining their foliage the year around, they add greatly to the home planting—as pleasing in winter as in summer. The flowers and also the fruits of some, are extremely showy. One can always find some variety in bloom.

Out of this great assortment of shrubs, we at Rosedale's have selected the best for general planting. When making selections, care should be taken to consider the ultimate height of the shrub, and preferred exposure, as for sun or shade. The most common mistake among home planters is to set a tall-growing plant in front of a window, which in a few years is obscured by a tangle of branches.

By the same token, very gratifying results may be had by planting quick-growing plants like Hibiscus, Abutilon, Privets and similar shrubs, but one must be ready to replace them at a later date before they get leggy and impossible to handle.

We have indicated in the descriptions the height and exposure best for each item. When no culture is given it is assumed the plants will do well in sun or light shade under average garden conditions.

Prices Throughout this Catalog Subject to Change Without Notice.

BRUNFELSIA FLORIBUNDA (Yesterday and Today)

Yesterday and Today

Brunfelsia floribunda. Sweetly scented flowers, opening a lovely shade of lavender—prettier indeed than our picture which is the best our printers can do with the color—fading to white. The in-between shade is slightly pinkish and suggests the name since all stages of flowers appear at the same time. This is one of the best shrubs for foundation planting. Generally not over 4 or 5 feet, although it will get twice as large. Deep green closely placed leaves and choice flowers make a pretty and showy sight in spring. Sun or shade. **Gal. 95c, 5-gal. \$3.85.**

Boxwood

Buxus japonica. The common boxwood for hedge planting also makes neat rounded shrubs in the planting around the house and garden. Stands merciless shearing, always quickly recovering. Full sun—rather rank growing in shade. **Gal. 70c, 5-gal. \$2.85.**

PLANTS FOR GOOD HEDGES

Low—Box, Guavas, Itea, Mahonia, Myrtle, Coton-easter.

Medium—Privet, Cotoneaster, Pyracantha, Camellia, Hibiscus.

Tall—Forbes Cypress (see page 13), Pittosporum, Prunus, Viburnum, Eugenia.

ABUTILON SPECIOSUM

Abutilon hybrids. One of the quickest growing of all shrubs, Abutilon will make a neat, flower-covered plant of good foliage and habit for several years before it gets overgrown and leggy. Leaves are like maple and flowers of all are shaped like those in our illustration but in the following colors: Yellow, Red and Pink. **Gal. 70c, 5-gal. \$2.85;** Orange (speciosa) and New Scarlet. **Gal. 85c; 5-gal. \$3.50.**

Glossy Abelia

Abelia Edward Goucher. A new and improved Abelia. Very much like Abelia schumannii with pink short tubular flowers but a better bloomer and with a longer season. Neat and refined, useful in many plantings calling for a medium height shrub. **Gal. 90c, 5-gal. \$3.50.**

Abelia grandiflora. A first class shrub growing to about 6 or 8 feet in height with arching branches covered with small, pointed, glossy green leaves. The leaves and flower bracts are red when new, making a lovely contrast with the older leaves and pearly white flowers in early summer. Hardy all along the west coast and in sheltered places inland where winters are not too severe. Sun or light shade. **Gal. 70c, 5-gal. \$2.85.**

CISTUS CORBARIENSIS

CORREA PULCHELLA

Chinese Plumbago

Ceratostigma willmottianum. Really dwarf plants are rare and this is one of them—even rarer are flowers in a good shade of blue. Score one again; for this lovely dwarf plant has loads of charming blue flowers during summer. Sun or preferably partial shade. Grows 2 feet tall in a rounded, close-growing form. Don't judge it too harshly as it grows in nursery cans—they are used only to make planting easier. Gal. 70c, 5-gal. \$2.85.

Night Scented Jasmine

Cestrum parqui. For ordinary planting, this shrub would rate a place in the screen planting or where attention would not be important, for the dull, light green foliage and inconspicuous light yellow tubular flowers are neither outstanding, but when evening comes, the delicate perfume given out by the flowers is entrancing and not overpowering. Gardens for evening enjoyment depend on this shrub. Sun or part shade, 6 feet. Gal. 70c, 5-gal. \$2.85.

Geraldton Wax Flower

Chamaelaucium ciliatum. Cut flowers that last? And are beautiful? Well, here is the answer to your question. In the last few years since its introduction, this shrub has raided even the New York cut flower market and before the war quantities of cut sprays were shipped east. It makes a tall 5 to 8 foot shrub with graceful branches, heath-like foliage and sprays of delicate five-petaled flowers of wax-like structure in white and pink with deep maroon-colored cups as centers. Sun, and dry porous soil is best. Gal. 95c, 5-gal. \$3.50.

Pearly Rockrose

Cistus corbariensis. Low spreading shrub possessing a very neat habit of growth; deep green leaves making an ideal background for the lovely white flowers. Full sun. Long blooming season. Gal. 70c, 5-gal. \$2.85.

Silver Bush

Convolvulus cneorum. Dense mounds of silvery foliage seldom over a foot high, covered with white morning-glory-like flowers an inch across, are the merits of Silver Bush. Full sun, stands abuse and never gets out of bounds. An excellent dwarf shrub. Gal. 70c, 5-gal. \$2.85.

Looking-Glass Plant

Coprosma baueri. Primarily a foliage plant. The round, waxy dark green leaves have a glossy texture sometimes enough to be a mirror. A great favorite for many years, for quick, dense foliage growth. Gal. 70c, 5-gal. \$2.85.

Australian Fuchsia

Correa pulchella. This excellent low-growing shrub from Australia has achieved great popularity in the last few years. Small rounded greyish green leaves and a mounded growth to about 2 feet spreading downward to the edges and dainty pink bells suggestive of Fuchsias, but not even distant relatives make this one of the more refined shrubs for planting in well-drained places about the house. Gal. 95c, 5-gal. \$3.50.

COTONEASTERS

General landscape planting places certain requirements on shrubs used to make the plant compositions or pictures in the garden. Among these are neatness, uniformity of growth, pleasing texture and form and general all around beauty. Whatever purpose you have in mind, you can safely select a Cotoneaster for that purpose. The dainty flowers in spring and glorious red berries later are the same for all, but the habit, height of growth and color of foliage and size of leaves vary with the varieties. We list dwarf, medium and large growing sorts, all require sun and little care once they are established.

COTONEASTER

apiculata, Cranberry Cotoneaster. Spreading almost flat on the ground—handsome foliage and berries as large as cranberries. Gal. 90c, 5-gal. \$3.50.

decora, Necklace Cotoneaster. Tall spreading shrub with long arching branches. Berries arranged along the stems like the beads of a necklace. Very attractive. 6 to 8 feet. Gal. 70c, 5-gal. \$2.85.

glabrata. Tall shrub with larger bluish leaves and good sized flower clusters. Use as a shrub or if trained as a small tree-like plant like tree roses it makes a superb specimen. Gal. 90c, 5-gal. \$3.50.

Glaucifolia. Low spreading shrub. Neat, little gray leaves. Lovely tiny white flowers followed by bright red berries. Sun. Gal. 70c, 5-gal. \$2.85.

parnayi. Of the tallest varieties, 6 to 10 feet, this is the best; large arching branches, always graceful, bears small, dark green leaves and large clusters of brilliant red berries. Gal. 70c, 5-gal. \$2.85.

salicifolia. Tall large shrub about 10 to 12 feet. Leaves larger than most. Berries bright red, showy. Gal. 70c, 5-gal. \$2.85.

Canary Bird Tree

Crotalaria agatifolia. Large shrub or small rounded tree with light green graceful foliage and quantities of unique flowers that look for all the world like little greenish-yellow canary birds, perched on the branches. Needs no special care, doing best in full sun. Gal. \$1.25, 5-gal. \$3.85.

Fragrant Daphne

Daphne odora marginata. Slow growing, making a compact shrub about 3 or 4 feet tall, with narrow, white margined 3-inch leaves, and sweetly fragrant flowers in early spring. These are pink, fading to white, waxy and popular with many gardeners. Growing conditions practically identical to Camellias, as to soil and exposure and therefore goes well in Camellia plantings but not necessary to have acid soil. Gal. \$1.75, 5-gal. \$4.85.

CANARY BIRD TREE (*Crotalaria Agatifolia*)

Grow Rosedale's Gardenias

Breath of Heaven

Diosma. For quick effect in foundation planting and for filling in holes at the bases of screen plantings, this rounded 4-foot shrub with fine yellow-green heather foliage is particularly useful. In winter and spring it is covered with tiny flowers in quantities such as to color the entire shrub. We offer both pink and white flowered forms. Gal. 70c, 5-gal. \$2.85.

Golden Dew Drop

Duranta stenostachys. New. An improvement over the old Duranta, is this closer growing form, particularly desirable for its better foliage, especially in winter, almost spineless growth, and lavender verbena-like flowers, followed by yellow berries. Sun. Gal. 90c, 5-gal. \$3.50.

HEATHER

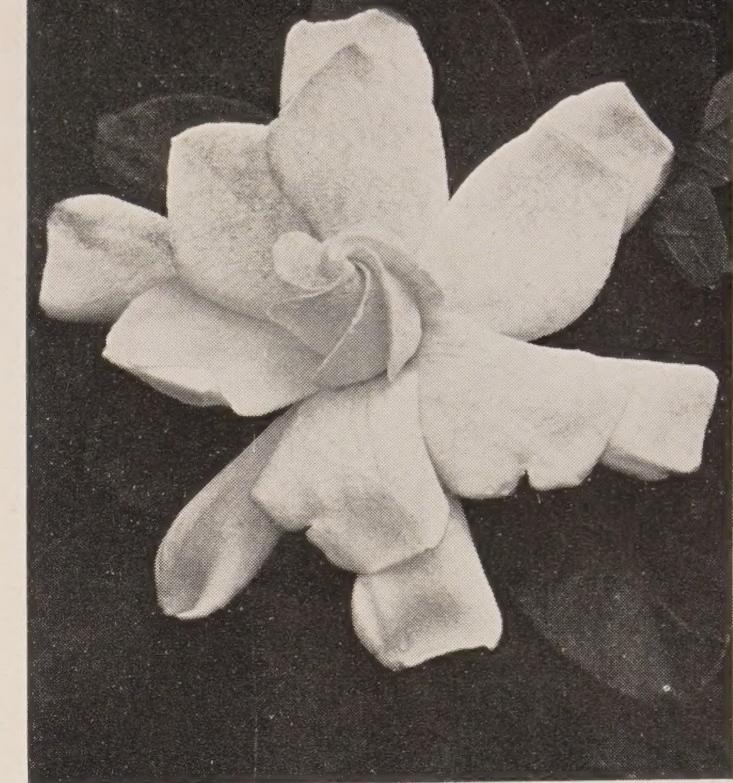

Erica melanthera rosea. The best winter blooming heather. A tall, narrow, billowy mass of tiny needles covered with small ivory pink bells. When in bloom, makes a very beautiful sight. Hardy and longer-lived than any of the larger flowered French heathers. Gal. 75c, 5-gal. \$3.30.

Eugenia

Eugenia myrtifolia. Although Eugenia becomes a large tree of tremendous proportions, its use as an ornamental is restricted to its early life. When small, it is a compact narrow mass of exceptionally fine small leaves, reddish when new, dark glossy green as they mature. Stands clipping as well as box and, therefore, makes very fine hedges or tall narrow pillars for accent. Trained as a small tree, it shows its rosy-red fruits to best advantage. Sun. Gal. 70c, 5-gal. \$3.85.

Gold Flower

Hypericum henryi. Bright golden yellow flowers 1 to 2 inches across that literally reflect the gold of sunlight, make this a prize for the summer garden. Makes a compact, rounded shrub about 3 feet high and through, reveling in poor soil and full sun. Gal. 70c, 5-gal. \$2.85.

GARDENIA MYSTERY

For Corsages . . . GARDENIAS

Grow Gardenias at home and have your own corsages all summer. As ornamental shrubs, Gardenias rate very high—the depth of green is not too deep because the sheen on the leaves lightens the effect by reflecting light. They require very acid soil and often show yellowing in the leaves. Applications of acid fertilizer, sulfur or alum correct this and new bright green readily returns. When the old leaves drop, just before growth, they become a rich yellow, which lasts only a short time and is quite different from the yellowing caused by alkaline soil.

Gardenia Rosedale's Mystery. The finest development in a large-flowered Gardenia for home growing. Flowers vary in size from 3 to 5 inches across. Sun, but sometimes will do well in part shade. Gal. 95c, 5-gal. \$3.50.

Gardenia Veitchi. Desirable as an "ever blooming" Gardenia. Produces flowers all summer although somewhat smaller in size than Mystery, they are none-the-less perfect in form and fragrance. Gal. 90c, 5-gal. \$3.50.

SUGGESTIONS FOR FOUNDATION PLANTING LOW GROWING

For Sun	For Shade
Hypericum henryi	Azaleas
Myrtus compacta	Gardenia

HOW TO PRUNE EVERGREEN SHRUBS

Pruning of shrubs in this group should be done as soon as new growth starts. This is easily detected by noticing new leaves and stems forming, which indicates the sap is flowing. Cuts will heal over quickly and growth in the desired direction will follow. There is a limit to the amount of pruning we should do. Little can be accomplished in the way of dwarfing shrubs. About all we can do is to take out old wood and cut wayward growths that would otherwise destroy the symmetry of the specimen. When used as screen plantings, such shaping is unnecessary because it is the mass of foliage and not the individual specimen that is desired.

CAMELLIA ROSEDALE'S BEAUTY
Trade Mark Registered

HOW TO GROW CAMELLIAS

Camellias do best in shade or semi-shade, in soil showing an acid reaction. The easiest way to provide this acidity is to prepare large planting holes, or beds, if necessary, to plant several; digging wider than seems necessary and at least 18 inches deep. Mix some of the best soil with equal parts of leaf mold or peat and sand, so that the resulting soil is light and spongy. Fill the holes or bed, soak to settle, and several days later, set out the plants. Since alkali in the water will gradually overcome the acid, it is necessary to apply a dusting of garden soil sulphur once every three months, using enough to color the soil light yellow and follow with a thorough watering. Alum may also be used, but is not as good to use as the sulphur. Mulches of leaf mold or peat are beneficial to conserve moisture and keep the soil cool about the roots. They need moisture, but should be planted so the drainage is away from the stems.

Rosedale's Selected Camellias

Rosedale's Beauty. An exceptionally fine formal flower of rich glowing pink. Shows only a few stamens in some flowers. Petals pointed at first, becoming well rounded. Not tight and dense as in Pink Perfection, but gracefully composed. A real delight—free flowering. **Gal. \$3.50, 5-gal. \$10.00.**

Emperor Wilhelm. Very choice peony-type Camellia, much like Chandeli elegans, but flowers have better substance. The broad flat outer petals surround a dense ball of twisted central petaloïds in a striking manner. Deep Camellia-rose, with white markings. **Gal. \$10.00, 5-gal. \$30.00.**

Alba plena. One of the choicest white Camellias. Lovely pure white formed flowers resembling open water lilies with rounded petals. Excellent deep green foliage. Very choice. **5-gal. \$10.00.**

Adrian le Brun. Symmetrical, double flowers of deep rose. **Gal. \$1.85, 5-gal. \$6.50.**

Chandeli elegans. Peony-type flowers of good size 4 or 5 inches, although sometimes quoted as 6 inches, of a lovely soft rose with irregular white markings. One of the most popular of this class. **Gal. \$2.85, 5-gal. \$7.75.**

Cheerful. Well named, a very free-flowered type, not as double as Pink Perfection, but fully as free with light bright red flowers. Shows a few stamens. **Gal. \$1.85, 5-gal. \$6.50.**

Covina. In bloom much like Cheerful, but everyone likes it for the bushy habit. Excellent foliage making it a first rate ornamental. Flowers lasting, rose-red. **Gal. \$1.85, 5-gal. \$6.50.**

Daikaigura. The first large-flowered Camellia to bloom in late September or October is this large flowered peony-type. Very beautiful with the twisted and curled petals in the center, surrounded by broad reflexed petals. Camellia-rose with white markings. **Gal. \$2.85, 5-gal. \$7.75.**

Imperator. One never forgets the flower of this one. Showy deep red peony-shaped. The small central petals make a graceful high center. **Gal. \$1.85, 5-gal. \$6.50.**

Jordan's Pride. Large fragrant semi-double flowers in a delicate light rose with a broad irregular white border, sometimes not very distinct and deeper streaks and splotches of deeper pink. To this add a few golden stamens and you have a reason for asking for this popular variety. **Gal. \$2.85, 5-gal. \$6.50.**

John Laing. Large double rose-pink flowers, 3½ inches or more across. Very symmetrical. A good pink. **Gal. \$1.85, 5-gal. \$6.50.**

Montironi. Enormous flowers of excellent form. Pure white, sometimes streaked with red. **Gal. \$1.85, 5-gal. \$6.50.**

Panache. Medium-sized flattened double flowers of soft pink with lighter variegations. A beautiful shrub. **Gal. \$1.85, 5-gal. \$6.50.**

Pink Perfection. The most popular pink formed Camellia. Free-blooming, fully double with closely and neatly arranged petals. **Gal. \$1.85, 5-gal. \$6.50.**

Purity. Popular white, perfectly formed, symmetrical flowers, fully double, showing stamens when fully open. A reliable bloomer. **Gal. \$1.85, 5-gal. \$6.50.**

Romany. Clean cut rosy-red flowers like Pink Perfection. Color unfading. Makes an excellent corsage flower—not too large. **Gal. \$1.85, 5-gal. \$6.50.**

CAMELLIA EMPEROR WILHELM

HIBISCUS

Choice Summer Flowering HIBISCUS

Few shrubs are as beautiful as these lovely Hawaiian imports. Their large flowers, single or double, are available in many varied and lovely colors from the delicate pink of Agnes Gault to the fiery crimson of Brilliant; to the delicate tones of buff, salmon and apricot. The individual flowers last only one day and can be used for flower arrangements, without water. Stick each blossom atop a thin green-covered wire, or a slender rattan strip.

Hibiscus prefer sun, but will flower in light shade. They are tender shrubs and need protection in areas where frosts occur. But in the event of frost, the plants will quickly recover, even if taken to the ground.

Rosedale's Brilliant Flowering Hibiscus

Agnes Gault. The enormous velvety shrimp-pink single flowers are the largest and showiest of all pink Hibiscus. A vigorous growing free-blooming shrub—perhaps the most popular of all. Gal. 90c, 5-gal. \$3.50.

Brillante. Sometimes called San Diego Red, and ranking in popularity with Agnes Gault. The flowers are smaller, but a vivid crimson rare in flowers. One of the best. Gal. 90c, 5-gal. \$3.50.

Buff. A lovely single type with flowers in a pleasing buff or apricot shade. The deep center has a faint crimson stain. Gal. 90c, 5-gal. \$3.50

Double Scarlet. Flowers best described as a double Brillante. Very pleasing in form and color. Somewhat dwarfer in habit of growth. Gal. 90c, 5-gal. \$3.50.

Double Yellow. Huge double flowers in a pleasing shade of sulphur-yellow. Gal. 95c, 5-gal. \$3.50.

Kama Paua. Single full flowers with broad rounded petals and short style column. Coloring is magnificent; deep salmon apricot varying to pink at the white center. Gal. \$1.25, 5-gal. \$3.85.

Kona (Double Agnes Gault). This is a favorite of ours, being the double counterpart of Agnes Gault, in the same delightful shade, fully double in a graceful manner and more free blooming than most doubles. Gal. 90c, 5-gal. \$3.50.

New Glory. Buff with orange veins and large crimson-scarlet center. Gal. 90c, 5-gal. \$3.50.

Orpah. Double red. Gal. 90c, 5-gal. \$3.50.

Peach Blow. Double flowers having the effect of one flower coming out of a larger base. Deep pink with a dark maroon zone at base of petals. Gal. 90c, 5-gal. \$3.50.

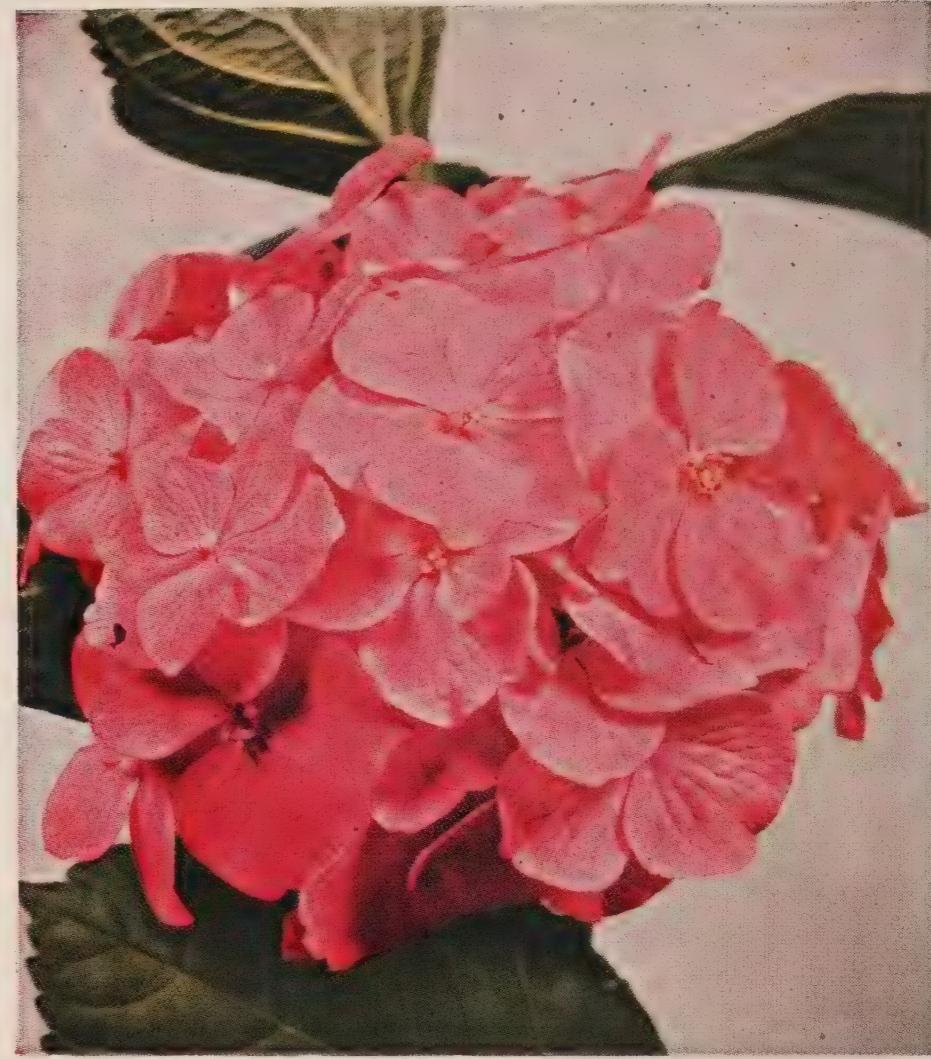

Purity. Tall, tree-like growth. Flowers pure white. Gal. 95c, 5-gal. \$3.50.

Sun Down. Double Orange, with pink shadings on the twisted petals. A very beautiful flower in sunset colors. Gal. 95c, 5-gal. \$3.50.

White Wings. Shrub with spreading graceful habit. Large white petals; red column and throat. Single. Gal. 95c, 5-gal. \$3.50.

Sweet Lavender

Lavandula vera. Low growing with small narrow grey-green leaves in a rounded dense mass. A fine shrub for sunny places. The lavender flowers, gay and fragrant, are those used for perfume and sachet. Gal. 70c, 5-gal. \$2.85.

HYDRANGEA TROPHEE

HYDRANGEAS for Shady Plantings

Hydrangeas, with their large lush foliage and huge flower clusters have always been a favorite of California gardens. In spring and early summer, when in full bloom, they make a gorgeous display. Plant in partial shade where they will receive a generous amount of moisture.

Hortensis. A taller shrub, sometimes 5 or 6 feet, very bushy and often loaded with clusters of bloom, very often covering the foliage. Will stand either sun or shade. Gal. 70c, 5-gal. \$2.75.

FRENCH HYBRIDS

These hybrids are really superb. Individual florets often an inch across, making a flower head nearly a foot across, on established plants. They need shade and considerable moisture. Hydrangeas are quick to show signs of dryness, but should never be allowed to wilt.

Chisholm. Double pink flowers. Gal. 80c, 5-gal. \$3.50.

Revelation. A good red. Gal. \$1.00, 5-gal. \$3.75.

Trophee. Best of the French Hybrids, brilliant deep rose. Gal. 90c, 5-gal. \$3.50.

Rosedale's Select Shrubs for Better Home Plantings

ILEX CORNUTA BURFORDI

HOLLY

Ilex cornuta, Chinese Holly. This is the best holly for southern California. The deep glossy leaves are like those of our popular Christmas decorations, but have fewer spines. Its habit of berrying is well established in our climate. **Gal. 90c, 5-gal. \$3.50.**

Ilex cornuta burfordi. A new improvement for mild climates. Leaves still less spiny and berry clusters larger and brighter colored than the Chinese Holly. **Gal. \$1.25, 5-gal. \$3.85.**

Sweet Spire

Itea ilicifolia. For shady or sunny places there are few shrubs to equal Itea as an ornamental. Its chief attraction is the holly-like leaves in a deep green, closely spaced, long and blunt. The fragrant flowers are long graceful catkins. **Gal. 70c, 5-gal. \$2.85.**

Double Dwarf Ti-plant

Leptospermum scoparium flore-pleno. Dwarf and free blooming, this is one of the best low growing introduction in recent years. Blooms several times a year, chiefly on new growths. The leaves are short, needle-shaped; flowers like little double pink roses. Plant in a well-drained soil, in a sunny exposure. **Gal. 95c, 5-gal. \$3.85.**

LANTANAS

Lantana camara hybrids. With Poinsettias and Palms, Lantanas are part of the California landscape. Lantanas are essentially shrubs for quick effects, but can be pruned back to the ground each season. Train them on walls, or allow to make large mounds on the ground. Foliage is good and they are always in bloom.

Dwarf Lantanas. Grow 2 to 3 feet high.
Cream. Pink. Yellow. Radiation.

Tall Lantanas. 5 to 10 feet, if trained against walls; or 3 to 4 feet high if wide-spreading. Silver Pink. White.

Any of above, gal. 65c.

Lantana sellowiana. Very popular as a ground cover for which it is particularly fine. It makes a dense cover a foot high, withstands some walking over, but this should be avoided. Shows a mass of lavender bloom for a long time each summer. Sun. **Gal. 65c.**

Ask for quantity prices.

Rosedale's Camellia-Leaved Ligustrum

Ligustrum Texanum

Rosedale's Camellia-Leaved Ligustrum. The beautiful glossy Camellia-like leaves and graceful arching stems make this one of the best evergreen shrubs we offer. In spring the rich creamy white lilac-like clusters of flowers are delightfully fragrant. Hardy in either full sun or shade. 5 to 10 feet. The best shrub for landscape planting. **Gal. 75c, 5-gal. \$2.85.**

Lemon Verbena

Lippia citriodora. This large-growing irregular shrub has long been popular as an herb, a fragrant foliage plant because the foliage has a lemon scent when crushed. An old fashioned shrub, best used as a filler in plantings for temporary show, but with careful pruning will keep in good condition for many years. **Gal. 70c, 5-gal. \$2.85.**

Holly Grape

Mahonia compacta. Low growing shrub with many branches closely covered with neat, glossy holly-like leaves. A good green in summer, slightly bronzy in cool weather. Yellow flowers and blue berries are added attractions. Grows 3 to 4 feet high, making a superb specimen shrub. **Gal. 90c, 5-gal. \$3.50.**

Banana Shrub

Michelia fuscata. Not a banana, but a dwarf intriguing relative of the Magnolias. Oval, 4-inch pointed leaves of medium green, conceal the dainty creamy-white flowers with their chocolate or maroon markings but release their delicious fragrance of ripe bananas. Slow growing, generally not over 4 or 5 feet. **Gal. \$1.25, 5-gal. \$4.85.**

African Box

Myrsine africana. One of the few substitutes for boxwood, and in many ways it is much superior to Box as a hedge. The tiny deep green bronzy leaves and reddish stems give the plant more color. The texture is soft and pleasing. Full sun only adds to the color. It will stand shearing well. **Gal. 95c, 5-gal. \$3.30.**

Orange Jessamine

Murraya paniculata. An attractive large specimen shrub with excellent glossy green foliage and pure white flowers with the fragrance of orange blossoms, followed by bright red fruits. We offer the compact form which is slow growing, reaching a height of 6 or 8 feet in time. **Gal. 95c, 5-gal. \$3.85.**

BANANA SHRUB (Michelia)

LARGE-LEAVED MYRTLE

Myrtle

Myrtus buxifolia, Boxleaf Myrtle. Rich, luxuriant foliage—the leaves are shorter than most Myrtles, an inch or so in length and about a half inch wide. Flowers are also larger and showy, with dainty stamens. **Gal. 75c, 5-gal. \$2.85.**

Myrtus compacta. One of the best plants for use in dwarf dense hedges, particularly those a foot or less in height. The dwarf habit, closely set tiny leaves lend themselves to this type of hedge. Also makes a beautiful dwarf specimen for garden use or in foundation plantings. **Gal. 70c, 5-gal. \$2.85.**

Heavenly Bamboo

Nandina domestica. Nandina is not a plant for close inspection but since it is one of the few richly colored shrubs in spring and fall, its use in plantings for color is important. The foliage assumes a brilliant scarlet in cool weather, at which time the broad flat clusters of red berries add to the color. White flowers in spring. Grows 3 to 4 feet high, with rather stiff stems, but dainty foliage and flowers. Sun. **Gal. 70c, 5-gal. \$2.85.**

Oleanders

Nerium oleander. As large specimen shrubs, Oleanders are old favorites. They make large rounded shrubs 10 to 15 feet high and blossom best in hot weather—the hotter the better. They are resistant to drought and heat, and thrive on little care.

Bettie. Dainty, single pale pink flowers. Very popular. **Gal. 75c, 5-gal. \$2.85.**

Cherry Ripe. Single pink, the shade of ripe cherries. **Gal. 75c, 5-gal. \$2.85.**

Com. Barthelemy. Flowers very large, up to 3 inches across, fully double, rich bright red, sometimes streaked with white. New and very choice. **Gal. 75c, 5-gal. \$2.85.**

Mrs. Roeding. Free blooming, somewhat smaller and dwarfer than most Oleanders. Flowers double, salmon-pink. **Gal. 75c, 5-gal. \$2.85.**

rosea, Double Pink. Flowers very large, freely produced. Although the shrub is of fairly large proportions, it is frequently seen as a good healthy specimen. **Gal. 75c, 5-gal. \$2.85.**

Jannoch's Single Red. The finest red single. Good color, and free blooming. **Gal. 75c, 5-gal. \$2.85.**

Curious Flowers

Ochna multiflora. Even to Californians, the flowers of Ochna are unusual. It is difficult to tell whether this shrub from Africa is in bloom or in fruit. To start with, the showy part of the flower is a red flower-like disc upon which are curious little yellow beak-like flowers, which later develop into green berries and finally to jet black. All the time, the calyx retains its bright scarlet color. This is a good shrub for medium height, small leaves, pleasing texture and good habit. Sun or light shade. **Gal. \$1.25, 5-gal. \$4.85.**

Sweet Olive

Osmanthus fragrans. The Sweet Olive has excellent foliage, and although not heavy or rank in growth, the flexible stems can be trained against a wall espalier fashion with ease. Then the delightful fragrance of the tiny flowers can be appreciated in even the smallest of intimate gardens. Use it also as a specimen shrub for sun or part shade. **Gal. 95c, 5-gal. \$3.50.**

Chinese Photinia

Photinia serrulata. The foliage of this medium-sized shrub is attractive and unusually colored at all times of the year, starting out in pleasing tones of red, it later assumes a rich bronzy green and as if this were not enough, sports heavy clusters of red berries at Christmas time. Sun or shade. **Gal. 75c, 5-gal. \$3.30.**

Cape Plumbago

Plumbago capensis. Rounded shrub or semi-vine with good foliage, dense growth and covered with phlox-like blue or white flowers almost continuously. It is so hardy and robust as to continue growing in abandoned places. **Gal. 70c, 5-gal. \$2.85.**

Princess Flower

Pleroma grandiflora. Brilliant rich purple flowers, velvety in texture, and often 3 inches across, unique in color and unusual with their five fish-hook stamens. A large shrub eventually 10 to 15 feet, with hairy reddish-green leaves. Good drainage, acid soil and plenty of water. Sun or shade. **Gal. 75c, 5-gal. \$3.50.**

PRINCESS FLOWER

Pittosporums

For California, Pittosporums are a trustworthy group of substantial shrubs. Although relegated to screen planting, they are useful for many purposes where large shrubs, with exceptionally fine foliage and delightfully fragrant flowers are desirable. Easy to grow, and need very little care.

Pittosporum eugenoides. Tall, narrow-growing type with light pale green foliage on dark black stems. Grows about 15 feet. Sun. **Gal. 70c, 5-gal. \$2.85.**

Pittosporum tobira. Low, spreading shrub, 6 to 8 feet high, with deep green long blunt leaves like a Laurel. Fragrant clusters of pearly white flowers in spring. A very popular and indispensable shrub. Sun or shade. **Gal. 70c, 5-gal. \$2.85.**

Pittosporum undulatum, Victoria Box. It would be almost impossible to name all the uses to which this plant can be put. A large shrub, it is equally valuable when trained as a small tree. The leaves have wavy edges all along the 4-inch length. Fragrant white flowers in spring. **Gal. 70c, 5-gal. \$2.85.**

PYRACANTHA ROSEDALE (Trademark reg.)

Pyracantha Rosedale

The lovely Pyracantha shown above, introduced by us several years ago, has achieved outstanding popularity and distinction for its show of red berries, resistance to blight and general all-around vigor. The long arching stems bear quantities of white flowers in spring and are loaded with berries each year. Use it as a specimen plant or in hedges of medium height—4 to 6 feet, or as clipped specimens. You can't go wrong with this proven variety, superior to all others, of which a great many have appeared since Pyracantha Rosedale was introduced.

Bush form (Untrimmed). Gal. \$1.00, 5-gal. \$3.35.

Pyramid form (Trimmed). Excellent plants for gifts—every one a specimen. Gal. \$1.50, 5-gal. \$3.85.

Pyracantha "Rosedale" for Xmas Berries

Poinsettias

Poinsettias are a common sight all winter in California where they are grown from 4 feet, if cut to the ground each spring; to 8 or 10 feet if not pruned. The bright red leaves surrounding the flowers are the showy part. Easy to grow in any sunny place.

Single red. The popular type. Gal. 70c, 5-gal. \$2.85.

Double Red (Henrietta Ecke). Colored leaves so numerous and closely set as to appear "double". Gal. 90c, 5-gal. \$3.50.

Polygala

Polygala dalmaisiana. Grows 3 to 4 feet high, with small yellowish green box-like leaves in a dense close mass. Flowers like small "orchids" in a pleasing purple, appear continuously. Free of disease, always attractive. Stands full sun. Gal. 75c, 5-gal. \$3.30.

Evergreen Cherries

Prunus caroliniana, Carolina Cherry. Always attractive with neat, glossy green foliage and white flowers. Most useful for many purposes—tall hedges, screen plantings, as background shrubs, or even as a small street tree. Gal. 70c, 5-gal. \$2.85.

Prunus integrifolia, Catalina Cherry. Extremely drought resistant native of exceptional ornamental value. Has bright glossy green leaves, neat and healthy in appearance, white flowers and one inch across "cherries". Stands shearing for hedge work. Gal. 75c, 5-gal. \$3.50.

Prunus laurocerasus, English Laurel. One of the best foliage plants for any purpose. The leaves are larger than either of the above, 4 or 5 inches long and about 2 inches across, a shiny good green. Makes a large rounded shrub for screen planting and tall thick hedges. Sun or shade. Gal. 70c, 5-gal. \$2.85.

Jungle Queen

Rondeletia cordata. Popular evergreen shrub growing 6 to 8 feet tall with luxuriant green foliage the year around. The dainty blooms in large clusters blend pink and yellow petals on rich salmon-pink tubes. Does best in sun or part shade if plenty of moisture is assured. Gal. 95c, 5-gal. \$3.85.

Rondeletia amoena. Like the Jungle Queen except the leaves are larger and the flowers perhaps more vivid in their coloring, although smaller—rich pink, with yellow bearded throats. Gal. 95c, 5-gal. \$3.50.

Ruellia

Ruellia macrantha. Showy, everblooming shrub making a rounded spreading plant with large leaves and long funnel-shaped rose-pink flowers, almost all year around. Best in light shade or a sheltered position. Gal. 70c, 5-gal. \$2.85.

Pink Indian Hawthorne

Raphiolepis indica rosea. The best of this slow-growing group of shrubs. Foliage very good, consisting of narrow pointed leaves and clusters of bright pink flowers in spring. A medium sized shrub growing at best 4 feet tall, needs no pruning and little care, once established. Gal. 75c, 5-gal. \$3.30.

Australian Blue Bell

Sollya heterophylla. Either a shrub, vine or ground cover, Sollya fills a large area with long slender twining stems, healthy light green foliage and myriads of blue bell shaped flowers. An excellent cover plant for banks, low fences, tree stumps, rocks and the like. Sun or part shade. Gal. 75c, 5-gal. \$3.30.

Yellow Oleander

Thevetia nerifolia. In many ways like regular Oleanders. Leaves much narrower and the flower a rich yellow, more tubular in form. 8 to 10 feet. Sun. Gal. 75c, 5-gal. \$3.50.

Viburnums

Viburnum cinnamomifolium. Large leaves and enormous flower clusters followed by shiny blue-black berries. An excellent tall specimen shrub for sheltered and shady places. Gal. 95c, 5-gal. \$3.85.

Viburnum suspensum. Excellent hedge plant making a dense green mass of fine clean neat foliage. Flowers and fruit of little ornamental value. Use it as a screen plant, where an 8 to 10 foot shrub is needed. Sun. Gal. 70c, 5-gal. \$2.85.

Shiny Xylosma

Xylosma senticoso. An excellent foliage plant with that shade of green best for background planting. Never appears heavy and overpowering — rather a large dense rounded mass of neat glossy-green foliage, 8 to 10 feet. Stands full sun very well. Gal. 80c, 5-gal. \$3.30.

Remember Rosedale's Service will fill all your garden wants. We have many items in stock, not listed in this catalog.—Rare plants, garden supplies, seeds, and bulbs.

Due to present conditions, not in our control, the prices of some items may vary somewhat from those listed in this catalog. Customers desiring to purchase plants in larger quantities may receive special quotations.

Patented Roses

Selection of the Finest for California

Charlotte Armstrong. (Pat. 455) For continuous bloom in all weather. Perfect flowers from lovely long-pointed deep red buds, varying from red to cerise according to the weather. **\$1.50 each.**

Dickson's Red. (Pat. 376) A favorite of many rose growers, combining warmth of color and richness of fragrance. Continuous in bloom, excellent in form, color and lasting quality when cut. Makes an excellent bush with good foliage. **\$1.25 each.**

Douglas MacArthur (Pat. 581). You will want this brand new rose for your garden. The large long-pointed buds open to fully double, high centered flowers of delft rose with touches of bronze at the base of petals. Long-lasting when cut, makes a vigorous upright bush, blooming continuously. **\$1.50 each.**

Heart's Desire. (Pat. 501) The finest red rose of recent introduction. Perfect deep red buds and large deliciously fragrant flowers are produced in quantity on this lovely rose. Healthy vigorous growth. **\$1.50 each.**

Lowell Thomas (Pat. 595). A very fine canary yellow rose. Flowers are high centered from long pointed buds. Color lasting well. Growth vigorous, compact with upright branches and leathery foliage. **\$2.00 each.**

Mirandy (Pat. No. 632). All America Winner 1944. A glorious deep red rose. Excellent in bud and as open flowers. You will like this new rose named in honor of Mirandy of radio garden fame. **\$2.50 each.**

Mme. Chiang Kai-Shek. (Pat. applied for.) Large, long-pointed buds, opening to huge empire-yellow roses fading to a good tone of lemon yellow as the flower matures. A vigorous grower with glossy, dark green foliage. **\$2.00 ea.**

Santa Anita (Pat. 539). Lovely clear pink flowers of perfect form and good size. Excellent for cutting. **\$1.00 each.**

Shangri-la (Pat. rights res.). Long pointed buds with unfurling petals being a symphony of the tints of dawn —buff, salmon and rose. The open flowers are beautiful exquisite pink. **\$1.50 each.**

Texas Centennial. (Pat. 162) A very popular sport of a very popular rose, President Hoover. Just change the color of Hoover in your mind to a bright glowing carmine, or in cooler weather a deep blood red and you won't resist this beauty. **\$1.00 each.**

The Chief. (Pat. 456) Large long-pointed buds on long stems, varying in color from deep rose to flame according to the season and opening to full flowers of flame, coral and copper, assuming an orange-pink as the flowers age. The rich fruity fragrance is unusual. **\$1.25 each.**

MME. CHIANG KAI-SHEK (Plant Patent Applied For)

THE CHIEF
(Patent No. 456)

HEART'S DESIRE (Patent No. 501)

CHARLOTTE
ARMSTRONG
(Patent No. 455)

Rosedale's Popular Bush Roses

The following are non-patented varieties of proven merit. They have been with us for many years and because of their exceptional quality are still very popular. All roses are No. 1 quality. Listed for sale, bare root during winter and early spring. **Each 95c; any 10, your choice, \$9.00.**

Prices slightly higher in containers.

Autumn. Handsome buds of many petals, combining many of the tints of autumn, burnt orange, and in the open flower russet brown and bronzy red on a rich yellow ground. Delicious fragrance.

Christopher Stone. A fine red rose and immensely popular. The flowers are a glowing brilliant scarlet-crimson showing dusky shadings, but never bluing even in the hottest sun. Excellent substance, spicy fragrance.

Condesa de Sastago. Unsurpassed in brilliancy of color, this hybrid of Spanish origin combines glowing orange-scarlet petals bright yellow on the outside, in a lovely cup-shaped flower. Flowers and buds sweetly fragrant.

Dainty Bess. The most popular single rose and deserving of all possible praise for it is a pleasingly dainty plant with large clusters of pink flowers with wine-red stamens.

Dame Edith Helen. A very popular clear rose pink whose long stems and lasting qualities make very fine cut flowers. Blooms fully double.

Duquessa de Penaranda. An intriguing orange-apricot enlivened with beautiful coppery tones. This rose is one of the most pleasing for the vivid color combination, beautiful buds and excellent foliage.

Etoile de Hollande. Perfect medium size buds opening to excellent richly colored red flowers. One of the best red roses and long a favorite.

Frau Karl Druschki. An old favorite, pure white rose. Long pointed buds and beautiful, very double open flowers. It makes quite a husky growth and so needs ample room.

Federico Casas. Buds coppery-pink and yellow, often very much like Talisman with better shaped buds and more richly colored open blooms.

Golden Rapture. Showing rich pure yellow without any other shadings and seldom fading. Perfect roses with a mild pleasing fragrance.

Hadley. Very popular brilliant crimson rose. The color is rich and the flowers full and fragrant. Long stems for cutting. An excellent bush with mildew-proof foliage.

Hinrich Gaede. One of the richest colored of all multi-colored roses. A mixture of orange-scarlet, coppery orange and vermillion in a variety of combinations. The rich sweet fragrance is very pleasing.

J. Otto Thilow. Lovely rose-pink similar in form to Rose Marie, but larger. The perfect buds on stiff stems make wonderful bouquets.

K. A. Victoria. A very free-flowering rose. Pure ivory white, beautiful in buds and full flowers. Continuously in bloom. One of the best white roses for California.

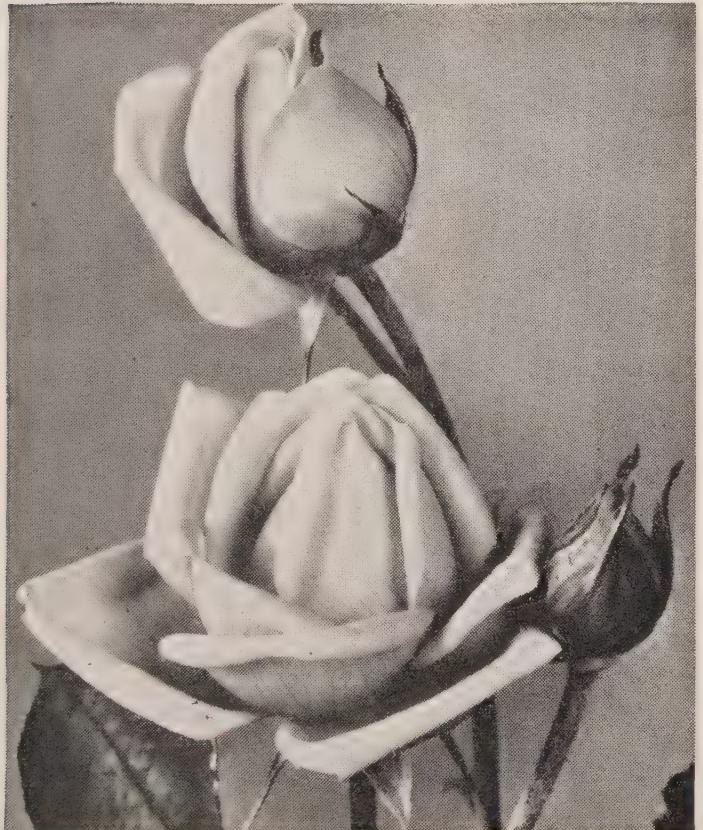

Los Angeles. Large strong growing, free flowering rose produced not far from here in California. Its lovely flowers are a glorious shade of rich flame pink with shadings of gold and yellow.

Lulu. Quantities of dainty long slender coral-apricot buds. Always in bloom and colorful in the garden. Lulu ranks high in popularity even though the flowers are single when open.

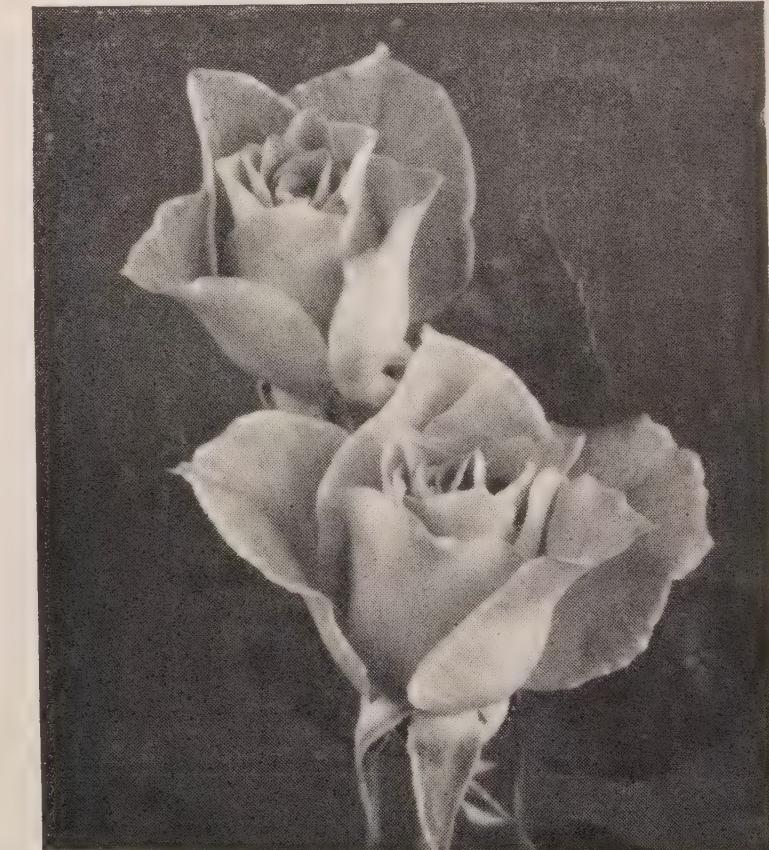

McGredy's Yellow. Perfectly formed buds of medium size, having plenty of petals in a lovely shade of light buttercup yellow. Withstands heat very well and does not fade. Deep green foliage.

AUTUMN

McGREDY'S YELLOW

TALISMAN

Mrs. Pierre S. duPont. A handsome deep golden yellow rose, spicily scented and showing deeper tones of orange. Splendid for cutting.

Mrs. Joseph Perraud. Lovely buds, made up of enormous petals in a perfect formed combination of nasturtium-buff lightened at the edges by luminous pink. Heart of the bud a glowing orange.

Mrs. E. P. Thom. One of the most popular yellow roses, out-performing many in California gardens. Buds and flowers nicely formed, a bright canary yellow.

Mrs. Sam McGredy. Beautiful copper-orange heavily flushed with red on the outside. Distinct among roses and very popular. Buds long-pointed, high-centered, open to double sweetly fragrant roses.

Night. This rose is almost black, so deep is the shade of crimson. The effect is heightened by shadings of black maroon. Spicy fragrance. Blooms are best in cool weather.

Picture. One of the finest pink roses. The strong, vigorous plants are in flower all season. Flowers long-lasting, pink with warm undertones of salmon, have a sweet tea fragrance.

Pres. Herbert Hoover. Very fine multicolored rose combining shades of cerise-pink, flame and scarlet on a yellow ground. Long buds, beautifully formed, open slowly into exquisitely fragrant flowers.

Red Talisman. A striking red sport of Talisman with the same handsome buds but maroon red opening to velvety blood red which varies much with the weather but is best when it is cool.

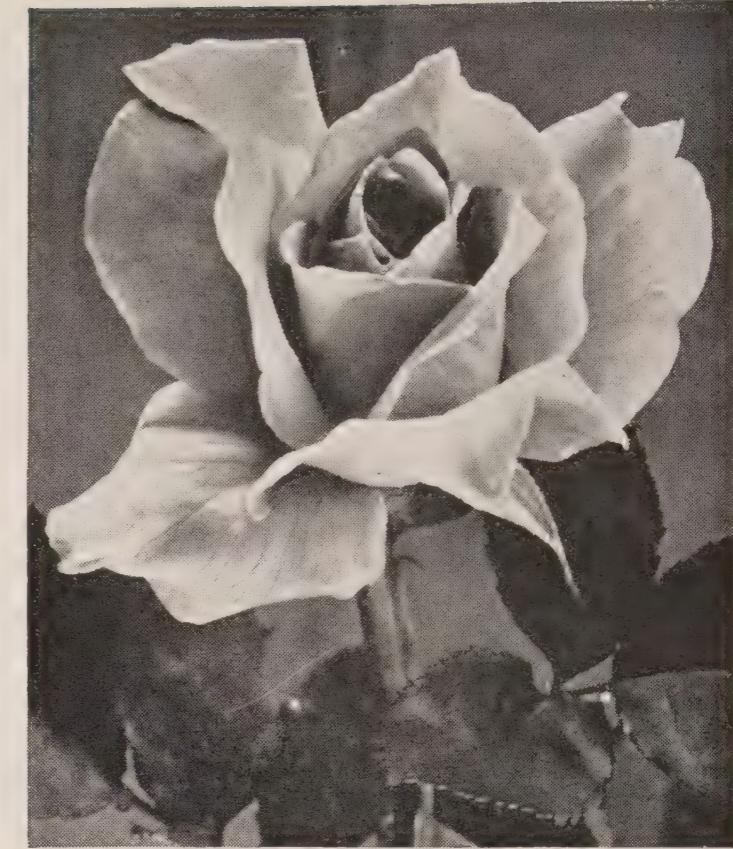

Rose Marie. Perfectly formed and long lasting Rose Marie is one of the best pink garden roses. Deep in color with beautifully veined petals and rich sweet fragrance. Free-flowering and long-stemmed.

Sister Therese. Long, slender tightly formed buds are always perfectly formed—chrome yellow tinged with carmine, opening to lighter yellow blooms with deeper tones of apricot and gold. Spicy fragrance, strong, vigorous, free-branching.

Southport. Lovely buds opening quickly to loosely but gracefully formed brilliant scarlet flowers. For brilliant color, delicate fragrance few other red roses equal Southport.

Talisman. This is probably the best known rose, unusual buds vase shaped and brightly and pleasingly colored orange-scarlet with shadings of rich golden yellow toward the base. Delicious fragrance. Flowers excellent for cutting.

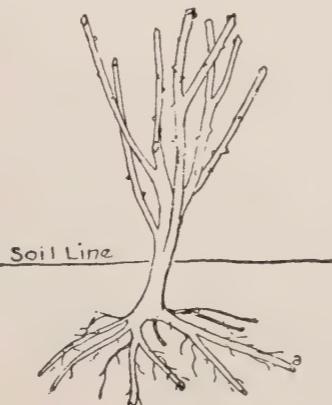

Victoria Harrington. Velvety dark red with undertones of brick-red. An unusually beautiful rose holding its color well even in hot weather. Pleasing fragrance, magnificent buds with beautifully reflexed petals.

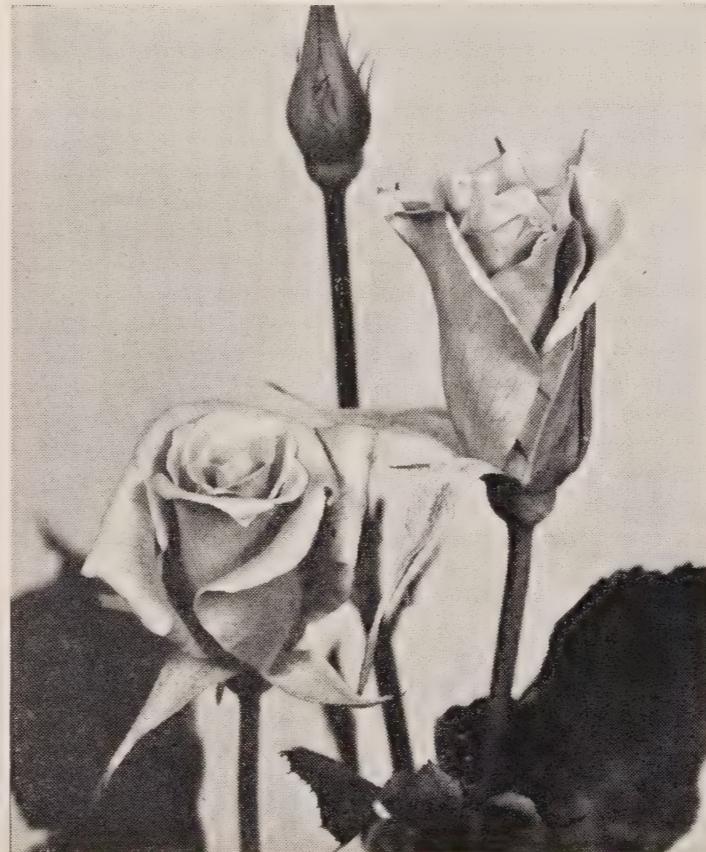

PICTURE

HOW TO PLANT BARE ROOT ROSES

Prepare planting holes as shown on page 21.

Spread roots out in a natural un-cramped position. Work fine soil about the roots. Water and tamp soil firmly about the roots, using a blunt stick. All broken roots should be cut with a sharp knife or pruning shears.

LULU

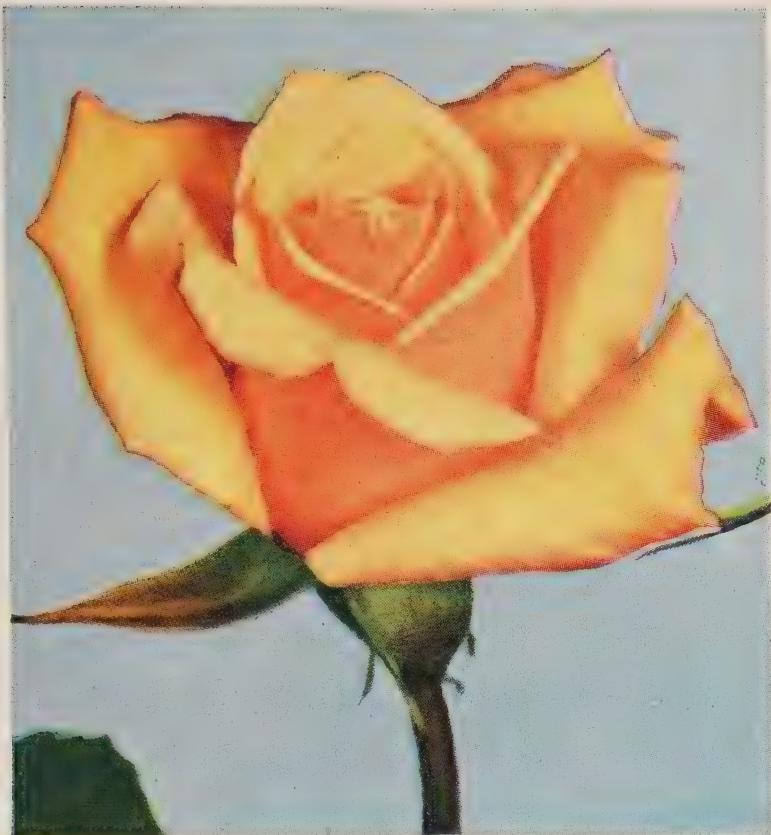

CONDEZZA DE SASTAGO

TEXAS CENTENNIAL (Page 11)

Rosedale's Climbing Roses

Each \$1.10 (Bare root). Prices higher in containers.

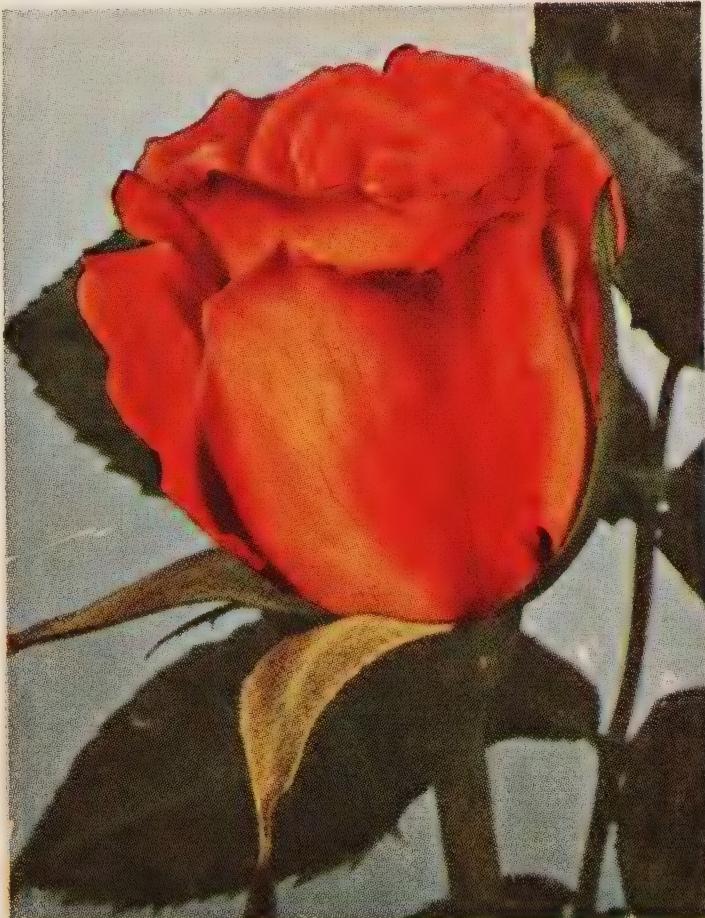

MRS. E. P. THOM

Cl. Los Angeles. The same glorious flame-pink flowers of the bush type. Free flowering and popular.

Cl. Mary Hart. One of the best of the new climbers. Strong vigorous growth and many velvety blood-red flowers, each with an undertone of amber which it gets from Talisman, of which it is a sport. **\$1.25 each.**

Cl. Mrs. E. P. Thom. Vigorous climbing rose covered with flawless yellow buds and flowers. Like the bush type in form of flowers and buds, but more free-flowering.

Pauls Scarlet Climber. Truly a mass of scarlet flowers when in bloom, this hybrid wichuriana with clusters of 3 to 20 semi-double blooms cover the much-branched canes from top to bottom. Very bright red.

PRES. HERBERT HOOVER

Cl. Picture. Strong growing climber covered with those delightful flowers like the bush form in rich pink, daintily veined and rich in undertones.

Cl. President Hoover. Vigorous climber sporting its lovely multi-colored blooms of yellow shaded pink, red and buff in great profusion. Better than the bushy type for garden performance.

Cl. Talisman. For fences, trellises, climbing Talisman is one of the most beautiful plants one could imagine. The striking long-stemmed flowers, ideal for cutting, make a gorgeous display.

MRS. P. S. DUPONT

Belle of Portugal. A giant climber of distinctive proportions—long strong canes and giant size buds 3 or 4 inches long, opening to amazingly beautiful salmon-pink flowers from January to June. The first year after planting finds Belle of Portugal making growth for the bloom to come.

Cl. Cecil Brunner. Perhaps the most popular climbing rose in California, this polyantha produces quantities of perfect miniature buds and roses. Pink. Foliage dense and handsome covering a vigorous vine.

Cl. Etoile de Hollande. The finest everblooming red climber. Strong growing well foliated climber with large red buds and beautiful open blooms. Flowers larger, longer stemmed and more freely produced than on the bush form, but with the same delicious fragrance.

Cl. Hadley. This climbing sport is vigorous and produces quantities of lovely velvety red flowers similar to those of the bush type.

Cl. K. A. Victoria. Strong growing, free blooming climber, most satisfactory with its deep, double, large white flowers.

Tree Roses

For Southern California, few roses are as fine for garden purposes as this lovely form. Buds selected for tree roses are the finest and are set on the stem in such a way that a compact flowering head is produced. Support the long canes on stout stakes at the time of planting. Give a severe pruning in January. Never allow the heads to get overgrown and woody. When pruning cut back the strong growth less than the weak. This thinning and shaping constitutes the only pruning care necessary for Tree Roses.

Place them along the borders of the garden, or in the rose garden where greater height is desired.

We offer No. 1 Quality only. Each \$4.25.

PINK

J. Otto Thilow. Flowers deep pink, delightfully fragrant.
Los Angeles. Free blooming, flame pink shaded gold and yellow.
Picture. Beautifully formed, lovely warm pink, delightful buds.
Rose Marie. Dark rose pink, unusually lovely veined petals.

CHRISTOPHER STONE

MULTICOLOR

Autumn. Burnt orange suffused with autumn shades of russet and bronzy red.

Condesa de Sastago. Startlingly beautiful bright scarlet and yellow.

Hinrich Gaede. Rich vermillion-orange.

Pres. Herbert Hoover. Large buds, long stems. Red, pink and buff on rich yellow ground.

Talisman. Lovely distinctive buds, yellow and vermillion.

FLAME, COPPER, BRONZE

Duchess of Athol. Intensely colored; rich copper-bronze flushed orange and old rose.

Duquesa de Penaranda. Orange apricot with deep coppery tones. Fragrant long pointed buds.

Mrs. Sam McGredy. Lovely fragrant coppery-orange flushed red.

WHITE

Frau Karl Druschki. Wax-like white flowers. Immense long buds.

K. A. Victoria. Old favorite, pure ivory white, long pointed buds, full flowers.

YELLOW

Feu Joseph Looymans. Lovely apricot-yellow. Large flowers.

Mrs. E. P. Thom. Free-flowering, beautiful bright yellow.

Mrs. P. S. duPont. Golden yellow fragrant buds. Beautiful foliage.

Sister Therese. Chrome yellow tinged with carmine, opening to lighter yellow with deeper tones of apricot and gold.

RED

Charlotte Armstrong. Long blood red buds, cerise red flowers.

Christopher Stone. Non-fading, brilliant glowing crimson-scarlet.

E. G. Hill. Dazzling scarlet, beautifully double flowers, fragrant.

Etoile de Hollande. Exceptionally fragrant deep red. One of the best.

Hadley. Popular, fragrant red rose.

Heart's Desire. Large deep red fragrant flowers, large buds.

Night. Almost black, the darkest red rose we have.

Poinsettia. Flaming red with long pointed petals as brilliant as a Poinsettia.

Red Talisman. Talisman buds in deep red. Velvety flowers.

Southport. Brilliant crimson blooms, dainty buds.

Victoria Harrington. Uniform red with undertones of brick-red.

SOUTHPORT

SISTER THERESE

WEIGELIA ROSEA

CREPE MYRTLE

The showiest of all summer-flowering shrubs, Crepe Myrtle makes a large specimen shrub or a small tree. One need never bother about care for these plants once they are established. The flowers are very delicate and possess a crepe-like texture in the five graceful petals. Flowers are grouped in large clusters at the ends of the branches, thereby giving a great show. Full sun, blooms during the heat of summer. Makes a fine lawn specimen or an efficient and pleasingly colorful screen plant where large areas of undesirable view need to be excluded from your garden.

Lavender Beauty. Dwarf bushy type with lovely light lavender flowers. Gal. 75c, 5-gal. \$3.30.

Watermelon Red. Very brightly colored. A rich bright pleasing red. Gal. 90c, 5-gal. \$3.50.

Pure white. Flowers pure white, very lovely and popular. Gal. 90c, 5-gal. \$3.30.

Rose. Abundant light pink flowers. Gal. 90c, 5-gal. \$3.30.

Rosedale's Spring Flowering Shrubs

These plants are usually avoided in home gardens, and planted around our mountain summer homes but their special merit lies in several definitely admirable characteristics. First of all, they grow to a definite height and then spread out. It is an easy matter to keep them in bounds by thinning; secondly, their show of flowers is often breath-taking, as in Crepe Myrtle, or delicately lovely as Philadelphus and Weigela. That these plants lose their leaves in winter is an advantage often overlooked. It allows greater contrast in plantings, freedom of air circulation during the rainy season, helping to keep the foundation of the house dry.

Flowering Quince

This thickly branched shrub almost bursts into flame each spring when it becomes covered as if by magic with its gayly colored single rose-like flowers. The glossy dark green leaves that follow have the same quality as many of the better evergreen shrubs.

Salmon Pink. A lovely shade of salmon rose. Gal. 70c, 5-gal. \$2.85.

Scarlet. Very showy orange-vermilion. Gal. 75c, 5-gal. \$3.50.

Double Flowering Pomegranate

Punica Chico. This is so different from the common dwarf flowering Pomegranates that it is difficult to make any comparison. The flowers are like fully double bright red carnations—the same size and freely produced during hot summer. A dwarf shrub 1 to 2 feet high, will offer many possibilities in foundation plantings and in the garden. Gal. 75c, 5-gal. \$2.85.

Mock Orange

Philadelphus. "Syringa", of old fashioned gardens. The older types have been cherished by Americans for many generations, but only fairly recently have these modern improvements been introduced.

Belle Etoile. 6 to 8 feet. Lovely pure white single flowers, each with a pale lavender center making a charming combination in bouquets—which brings up the finest quality of this shrub—cut-flowers, fragrant, and lasting several days, it makes one of the finest shrubs for the purpose. Gal. 75c, 5-gal. \$2.85.

Virginal. Somewhat older and still the best double. Pure white and extremely free flowering. Grows the same height and both are just the plants for enclosing intimate gardens. Gal. 90c, 5-gal. \$3.85.

Lilacs

Syringa persica laciniata, Cut Leaf Persian Lilac. We all like lilacs even if they won't bloom in southern California, but there we are wrong because the cut leaf form of Persian Lilac will bloom each year. Flowers are the same lilac color as those hybrids that won't bloom, and the foliage is delicately cut and a good light green. 6 to 8 feet. Gal. 75c, 5-gal. \$3.85.

Spiraea

Spiraea reevesiana, Double Bridal Wreath. Little pearly white fully double flowers covering the graceful arching branches, and the medium size dark glossy green leaves make this Spiraea one of the best. Withstands severe cold and heat well. Sun. 8 feet, but if flowers are cut for bouquets, it may be kept much smaller. Gal. 70c, 5-gal. \$2.85.

Weigela

Weigela Eva Rathke. This is more at home in the south than most of us realize and is, therefore, an ideal shrub for general planting. This six-foot shrub has bright red honeysuckle-like flowers, much larger and showier than the best Abelia. Sun. Gal. 75c, 5-gal. \$3.30.

Weigela rosea. Much like the above, but a lovely shade of pink. Gal. 70c, 5-gal. \$2.85.

PUNICA CHICO

Rosedale's Shade and Flowering Trees

DECIDUOUS SHADE TREES

The use of deciduous trees for shade purposes has been discouraged in California, where the climate suggests year around foliage. However, winter is our rainy season with dampness following rain, and less sunlight each day. Trees planted near the house that admit free circulation of air and penetration of welcome sunshine are preferable.

In the summer months, too, these trees have the advantage of cleanliness. Evergreen trees drop their leaves a few at a time so they always appear to be in leaf, whereas the deciduous trees lose theirs all at one time. During the summer months the evergreen kinds are shedding some of their leaves while the deciduous trees have new leaves which will last until late September or October. There is little distinction between the shade giving proportions of one type over the other, Maple Ash, Sycamore, or Chinese Elm are equally good, especially for street planting.

When pruning your trees, make clean neat cuts, always close to a main stem, leaving no stubs to die back and cause rot later. If attention is given to making a good start in training the tree, there will be little need of extensive pruning jobs later. When large cuts are necessary, use an appropriate tree paint to protect the cut surface.

PRICES ARE FOR BARE ROOT STOCK AVAILABLE JANUARY TO MARCH Prices higher in containers.

Silver Maple

Acer dasycarpum. Fast growing large trees for quick shade or screen are often necessary. To fill this request, we can't go wrong with Silver Maple. It is not really a wide spreading tree, but makes a generous top, well clothed in attractive maple foliage. The undersides of the leaves are silvery, hence the name, and lighten the color of the leaves. **8 to 10 feet, \$2.50; 10 to 12 feet, \$3.00.**

White Birch

Betula alba. Not really a shade tree, this beautiful deciduous tree makes wonderful clumps for lawn planting with attractive white bark and light yellow-green leaves. The white trunks are more attractive if birch is planted in front of dark evergreen trees or shrubs. Before the leaves fall they assume a bright yellow color. Give plenty of water for better growth. **8 to 10 feet, \$2.75; 10 to 12 feet, \$3.50.**

Cut Leaf Weeping Birch

Betula alba laciniata. The graceful weeping branchlets of this variety make a wonderful attractive specimen for lawn planting. Set in groups of three or five, depending on the space available, spacing them 2 to 4 feet apart for a better display of trunks and foliage. Leaves finely cut. A dainty and beautiful small tree well deserving its popularity. **6 to 8 feet, \$3.50.**

Modesto Ash

Fraxinus velutina glabra. A fast growing shade tree forming a dense rounded crown of deep green foliage. Modesto Ash was selected and propagated as a distinct variety because of its ability to shed dust during the dry rainless summer. It always has a

clear neat appearance. Fast growing and requiring little water, it thrives equally well along the coast or inland. **8 to 10 feet, \$3.00; 10 to 12 feet, \$3.50.**

Sweet Gum

Liquidambar styraciflua. This is the only large tree to turn really brilliant in fall. The maple-like leaves assume shades of crimson and scarlet, later becoming almost purple before falling. It makes a cone-shaped pyramidal crown well filled with foliage and not wide spreading. Thus it is ideal as a street tree, lawn specimen or even as a background or shade tree for medium sized lots. **5-gallon or balled specimens, 4 to 5 feet, \$3.75; 6 to 7 feet specimens, \$5.00. Not handled bare root.**

Sycamores

Platanus orientalis, European Sycamore. One of the finest shade trees for lawns or street planting. Makes a fairly compact rounded head of maple-like leaves. The bark is attractive on the trunk and larger branches because the outer parts peel off, thus exposing the light colored inner bark. Sycamores are clean, neat growing trees suitable for refined planting anywhere. They do appreciate generous watering, especially during growth. **6 to 8 ft. \$2.25; 10-12 ft. \$3.50.**

Platanus racemosa. A native tree and frequently seen as large, tall specimens with open branching crowns, and at other times as clumps of several trunks spreading in picturesque twisted fashion. The leaves are large and the individual lobes longer and more pointed than the European Sycamore, although the bark has the same mottled appearance. A neat tree either in youth or in old age. **6-8 ft. \$2.25; 10-12 ft. \$3.50.**

WHITE BIRCH
Chinese Elm

Ulmus pumila. A rapid growing shade tree similar to the evergreen elm but the branches are always more or less upright. Leaves small, deep green, well clothing the crown. They stay on until late in the year and return early in spring, giving a long season of dense shade. Chinese elm is a medium size tree, never getting very large either in height or spread. **8-10 ft. \$2.25, 10-12 ft. \$3.00.**

FLOWERING TREES

Malus arnoldiana, Arnold Crab. Small rounded trees with short trunk and spreading branches. One of the showiest spring flowering trees with red buds and pure white flowers. **\$2.00 each.**

Malus ioensis plena, Bechtel Crabs. Quite different from any flowering tree with its large 2-inch double flowers set closely among the stems. **\$2.00 each.**

Prunus blieriana. Best of the purple leaf plums. For ornamental purple foliage it is very fine but the large double pink flowers in early spring before the leaves give the suggestion of double flowering peaches. Hardy and showy. **\$2.00 each.**

Prunus persica, Flowering Peach. Flowering peaches are slightly later in season than the crabs. Like them, they are small trees laden with showy blooms before the leaves appear. Small specimen trees often spectacular when in bloom. **\$2.00 each.**

White, Pink (early or late), Red (early or late), Variegated (pink and white).

Rosedale's Broad-Leaf Evergreen Trees

In keeping with our description of conifers, these trees have broad leaves which remain in healthy condition all year. Many of these trees have extremely bright flowers, often in great profusion as in Bauhinia and Jacaranda, delicate and graceful in Clethra, Grevillea, large and lovely and at any time on Magnolias. Others are just first class shade trees useful for all places where shade in winter is not objectionable. All trees of this group are sold with soil on the roots.

Cape Chestnut

Calodendron capense. One of the loveliest small round headed trees for neatness of growth and large clusters of delicate rosy-lavender flowers in June. Plant in full sun, preferably in a light soil. Coming from South Africa, it needs little water. A specimen of Cape Chestnut will give years of satisfaction. **5-gal. \$3.85.**

Camphor

Camphora officinalis. The standard street tree in many communities, Camphor makes a uniform pleasing growth of light green leaves. The main branches make picturesque patterns, usually grey, but become black when wet by rains, thus increasing the effect. Camphor is distilled from the wood of this tree. **Gal. 70c, 5-gal. \$2.85.**

Carob

Ceratonia siliqua. Extremely hardy and suitable for street planting, this low round headed tree is one of the best. It has dark grey-green rounded leaves and inconspicuous flowers. **Gal. 75c, 5-gal. \$3.30.**

Lily of the Valley Tree

Clethra arborea. Small specimen tree, whose 4-inch long shiny green leaves make an attractive head. In late summer long panicles of fragrant white bell-shaped flowers appear. These delicate little blooms look like Lilies of the Valley, hence the name. Give plenty of moisture and plant where sheltered from hot, dry winds. **Gal. 95c, 5-gal. \$3.85.**

Eucalyptus

This group has achieved unusual significance in California and the warmer parts of the Southwest. It includes the only really tall growing trees, and many small flowering trees, all natives of Australia, and well suited to our growing conditions.

Eucalyptus ficifolia, Scarlet Flowering Gum. Dwarf, compact tree whose rounded head becomes literally ablaze with flaming scarlet flowers in summer. A useful specimen tree, the roots do not harm other plants. **Gal. 90c, 5-gal. \$3.50.**

Eucalyptus citriodora, Lemon Scented Gum. Tall, picturesque tree with graceful white trunk and upward-reaching branches. The soft, feathery tufts of long narrow leaves complete the picture. Leaves have scent of lemon-verbena. **Gal. 75c, 5-gal. \$3.30.**

Eucalyptus globulus compacta, Dwarf Blue Gum. Extensively planted for windbreaks because the bluish foliage

clothes the branches to the ground. Makes a height of 20 to 30 feet, adequate protection from the wind. For this purpose, set plants 5 to 10 ft. apart. **Gal. 70c, 5-gal. \$2.85.**

Silk Oak

Grevillea robusta. Tall, narrow tree, hardly spreading at all. The foliage fairly good, fern-like deep green, lighter on the underside. When in flower the sprays of deep orange-yellow flowers have the appearance of horizontal brushes as they project from the branch tips. **Gal. 75c, 5-gal. \$3.30.**

Jacaranda

Jacaranda mimosaeifolia. Showy flowering tree, attractive in June with its lavender-blue flowers. Large trees make an impressive sight. The flowers are tubular and in good size clusters; the foliage light green and fern-like. **Gal. 75c, 5-gal. \$3.50.**

Southern Magnolia

Magnolia grandiflora. Beautiful compact tree with large deep green shiny leaves and immense white waterlily-like flowers. Slow growing to a height of about 60 feet. Always clean and neat. Give abundant water. **Gal. 75c, 5-gal. \$3.50.**

Olive

Olea europaea, Manzanillo variety. Olives are both picturesque and beautiful with their graceful sprawling branches and blue-grey foliage. The fruits of this variety are among the best for pickling. Require little care once established. **Gal. 90c, 5-gal. \$3.50.**

Evergreen Pear

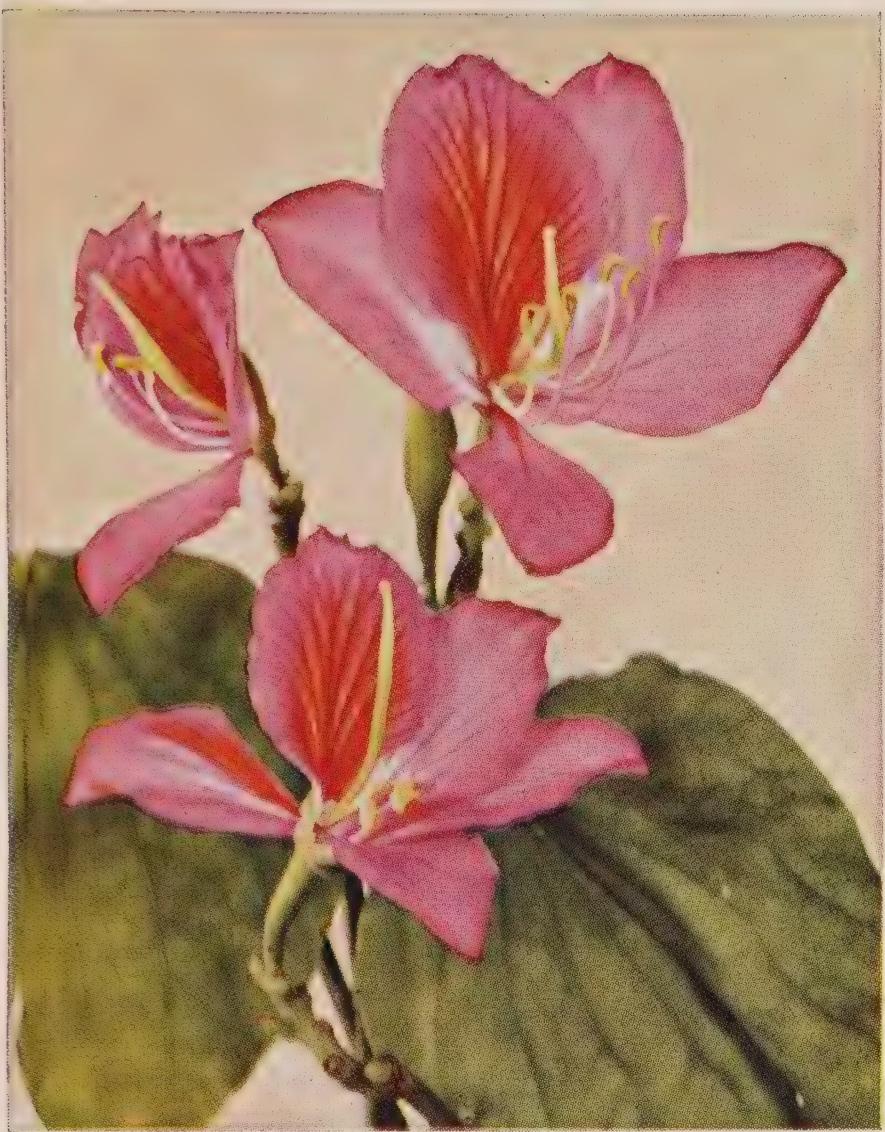

Pyrus kawakami. A dwarf evergreen tree useful as a flowering specimen where space is limited. Completely covered in spring with lovely white flowers which are its chief attraction. **Gal. 90c, 5-gal. \$3.50.**

Oak

Quercus agrifolia. Native to Southern California where it appears as lovely large specimen trees in open groves. This gives us an idea for planting—allowing plenty of room for spread of branches in a natural way, without pruning. **Gal. 75c, 5-gal. \$3.30.**

Evergreen Elm

Ulmus serpervirens. One of the best small evergreen trees for lawn planting, especially for small houses. Makes a small rounded tree with gracefully arching branches, held high enough to allow for outdoor furniture underneath. **Gal. 95c, 5-gal. \$3.85.**

PURPLE ORCHID TREE

Acacia

Acacia baileyana. The best of the Acacias for general planting. Plump bluish leaves, feathery in texture, completely clothing the dense round head. In late winter or spring it is yellow with fluffy yellow flowers. Does not cause lifting of the soil, heaving of pavements, etc., as does the Black Acacia and is never as dark and sombre. **Gal. 70c, 5-gal. \$3.30.**

Purple Orchid Tree

Bauhinia purpurea. For a showy small tree, Bauhinia has many merits. The flowers, 2 inches across, have an appearance similar to orchids, and are light pink to orchid purple with some admixture of white. At flowering time the tree is completely covered with flowers, especially if planted in sun. At this time, there are few leaves remaining, but it will quickly leaf out again as the flowers fade. **Gal. 90c, 5-gal. \$3.30.**

Vines - Cool Arbors, Pleasant Shade

Rosedale's Vines for Every Purpose

Queen's Wreath

Antigonon leptopus. A quick growing vine from a perennial root, excellent in the hotter, drier areas because the vine part is renewed annually, quickly clothing porch trellises with dainty green foliage and long pendant clusters of lively pink. Gal. 75c, 5-gal. \$3.30.

Bougainvillea

Bougainvillea Crimson Lake. The most widely planted of all with real red, not magenta flowers. This variety makes a

HIBBERTIA VOLUBILIS (GUINEA FLOWER)

truly magnificent show when allowed to scramble over walls, roofs or arbors. 5-gal. \$4.85.

Bougainvillea Panama Queen. New variety of exceptional merit. Flowers very large often 2 inches across with the papery bracts a clear pleasant light pink, an unusual color. 5-gal. \$4.85.

Trumpet Vines

Bignonia chamberlaini, Yellow Trumpet Vine. Strong growing vine producing a luxuriant background of pleasing green foliage for the showy clusters of yellow trumpet-shaped flowers. An excellent cover for arbors where quick shade is desirable. Gal. 90c, 5-gal. \$3.30.

Bignonia cherere, Scarlet Trumpet. Flowers very large, 4-5 inches long, flaring to a 2-inch wide mouth. Bright red with rich yellow tube, the outside being tinted with light lavender. Strong grower. Gal. 90c, 5-gal. \$3.30.

Bignonia violacea, Lavender Trumpet. The most popular Bignonia probably because it is dainty in growth and free flowering in habit. Flowers light lavender with deeper veins are very pretty and cover the vine in late spring and early summer. Shade or sun. Gal. 90c, 5-gal. \$3.30.

Evergreen Grape

Cissus rhombifolium. One of the finest of all foliage plants for pots or outdoors. The leaves are dark, shiny green, each with three leaflets and prettily veined. Does well in shade or sun. Especially fine in window boxes when the foliage can hang over the edge. Gal. 75c, 5-gal. \$3.30.

Vanilla Scented Trumpet Vine

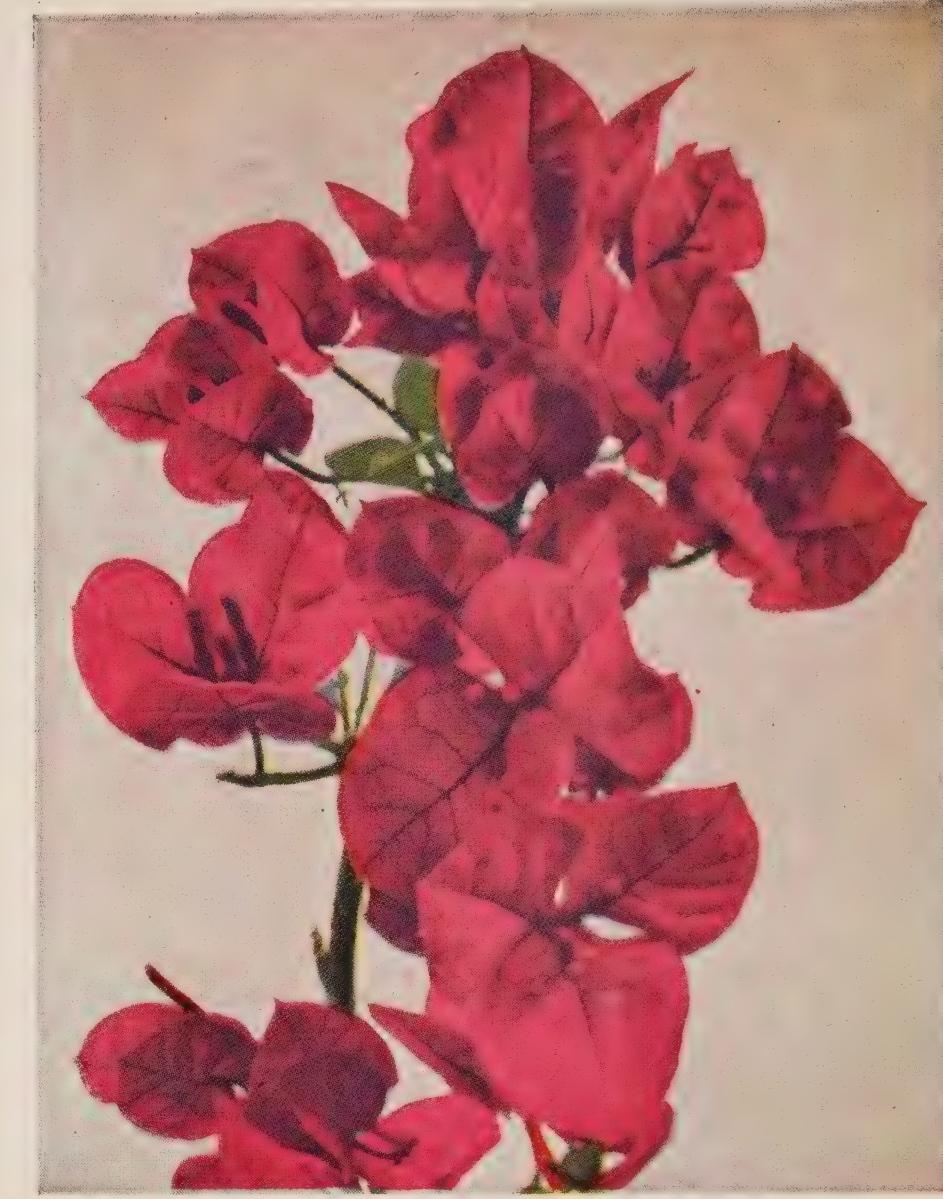

Distictis cinerea. Not usually seen in plantings but once established, few vines can equal the lovely mass of fragrant purple trumpets, equal in size with those of Bignonia violacea. Sun or half shade. Gal. 95c, 5-gal. \$4.85.

Fatshedera, Botanical Miracle

Fatshedera lizei. Don't worry about the name of this unusual plant. You can point and tell your friends it is half Rice Paper plant, whose other name is Fatsia, and Ivy, Hedera, which explains the unusual name, but for deep green cool foliage of large attractive leaves, it is in a class by itself. Sun or shade, fine trained over a wall or on a trellis. Gal. 75c, 5-gal. \$2.85.

Creeping Fig

Ficus repens. This close-growing clinging vine is one of the most practical wall covers. The rounded leaves are about an inch long and are set very close together. Does not ruin masonry. Sun or shade. Gal. 75c, 5-gal. \$2.85.

BOUGAINVILLEA CRIMSON LAKE

Carolina Jessamine

Gelsemium sempervirens. An excellent twining vine covered with fragrant yellow trumpet-shaped flowers in late winter. Makes a neat growth and holds its foliage well the remainder of the year. Sun or shade, adaptable for most any soil. Gal. 90c, 5-gal. \$3.50.

Guinea Flower

Hibbertia volubilis. Showy golden flowers 2 inches across appear quite freely on this healthy Australian vine most all summer. Sun or part shade. A very good new addition to California horticulture. Gal. 75c, 5-gal. \$3.30.

Ivy

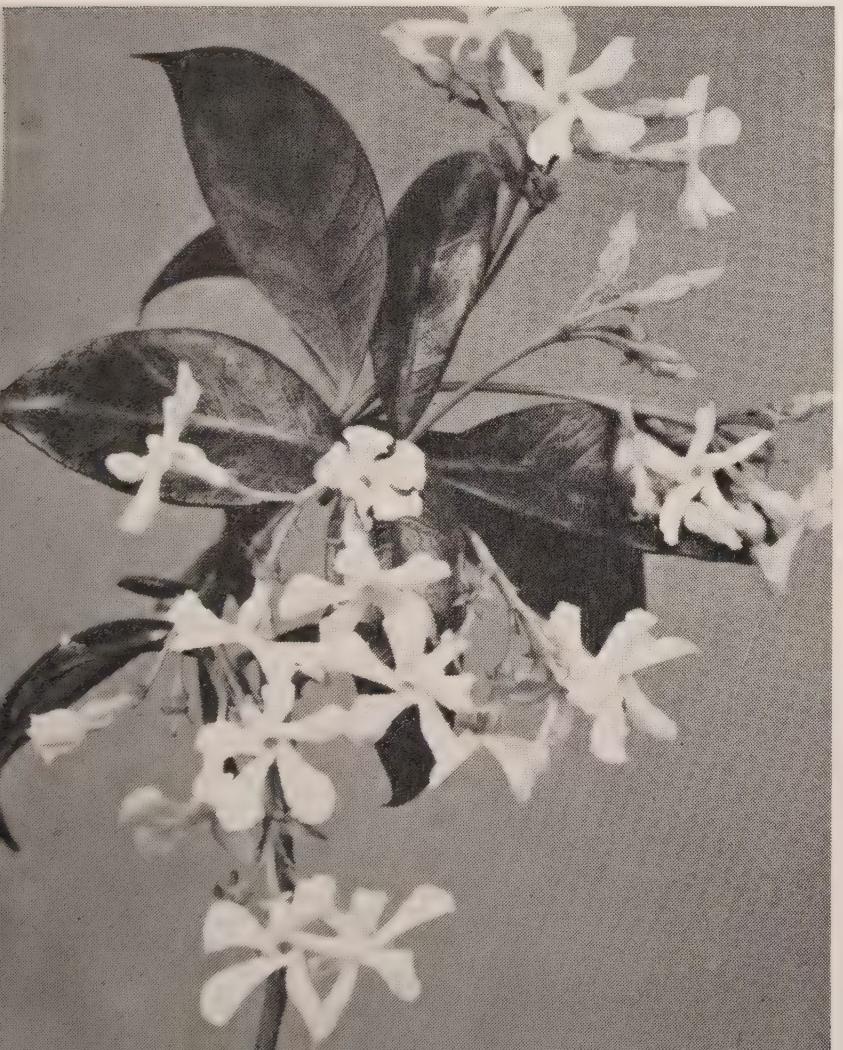

Hedera canariensis, Algerian Ivy. This is the large leaved fast growing ivy which is so good as a clinging wall vine. Gal. 90c, 5-gal. \$3.30.

Variegated. Leaves with creamy-white markings. Gal. 75c, 5-gal. \$3.30.

PASSIFLORA PFORDI

STAR JASMINE (Rhynchospermum)

Jasmines

Jasminum grandiflorum, Spanish Jasmine. Hardy, slender-growing twining vine making a quick cover for fences and trellises. Fragrant white flowers. Gal. 75c, 5-gal. \$2.85.

Jasminum liqustrifolium. Most often making a medium size plant with deep green glossy leaves, almost leathery in texture, but can be trained as a pleasing deep green vine. Flowers white, fragrant. Gal. 75c, 5-gal. \$2.85.

Jasminum primulinum, Primrose Jasmine. In habit of growth, luxuriance of deep green foliage it is equal to the Spanish Jasmine except the flowers, which are semi-double golden yellow. Gal. 75c, 5-gal. \$3.30.

PASSION FRUIT — PASSION FLOWERS

Passiflora edulis. The edible passion fruit which in recent years has become more and more popular for its fruits. They make delicious and unusual fruit juice—used like grape juice. Grown on trellises, allowing 10 or 12 feet for vines to cover overhead, or on fences where they should be trained like a grape vine. Gal. 90c, 5-gal. \$3.30.

Passiflora pfordi. One of the showiest Passion vines. The large 4-inch flowers being very beautiful and intricately formed, are blue with a blush tint inside. Makes a quick cover for fences. Gal. \$1.50, 5-gal. \$3.85.

Star Jasmine

Rhynchospermum jasminoides. Delicate twining vine with pointed leathery deep green leaves and in June or later, covered with hanging clusters of pure white pin-wheel shaped fragrant flowers. One of the finest vines for sun or shade. The fragrance increases in evening. Gal. 95c, 5-gal. \$3.50.

PINK LACEVINE

Securidaca volubilis. Imagine a pink Silver lavevine planted on a sunny fence or arbor covered with quantities of bright pink flowers and you have some idea of how this superb new vine looks. Give plenty of sun and a not too rich soil. Gal. 95c, 5-gal. \$3.50.

Cup of Gold

Solandra guttata. In a class by itself the glorious cup of gold or "Copa de Oro" of the Spanish Americans is a great spreading twining vine whose enormous buds and open funnels of golden yellow are amazing. Give full sun and not much water, and fertilize during summer. Gal. 90c, 5-gal. \$3.50.

Cape Honeysuckle

Tecomaria capensis. Useful as a shrub or vine with glossy green leaves and showy scarlet flowers most of the year. Hardy and easy to grow. Makes a 6 to 8 foot shrub. Sun. Gal. 70c, 5-gal. \$2.85.

Flame Tecomaria

New Flame Capehoneysuckle (Tecomaria shirensis). A new relative of Capehoneysuckle promising to be a very useful plant for southern California plantings—either as a shrub or vine. The slender arching branches with their bright green leaves and large clusters of trumpet-shaped flowers in a flame-orange make a glorious show. Gal. 95c, 5-gal. \$3.50.

Two-toned Trumpet Flower

Tecoma jasminoides rosea. Delicate climbing vine with light green airy foliage and showy clusters of light pink trumpets with deep cherry red centers. Very beautiful, easy to grow. Full sun or partial shade. Gal. 75c, 5-gal. \$3.30.

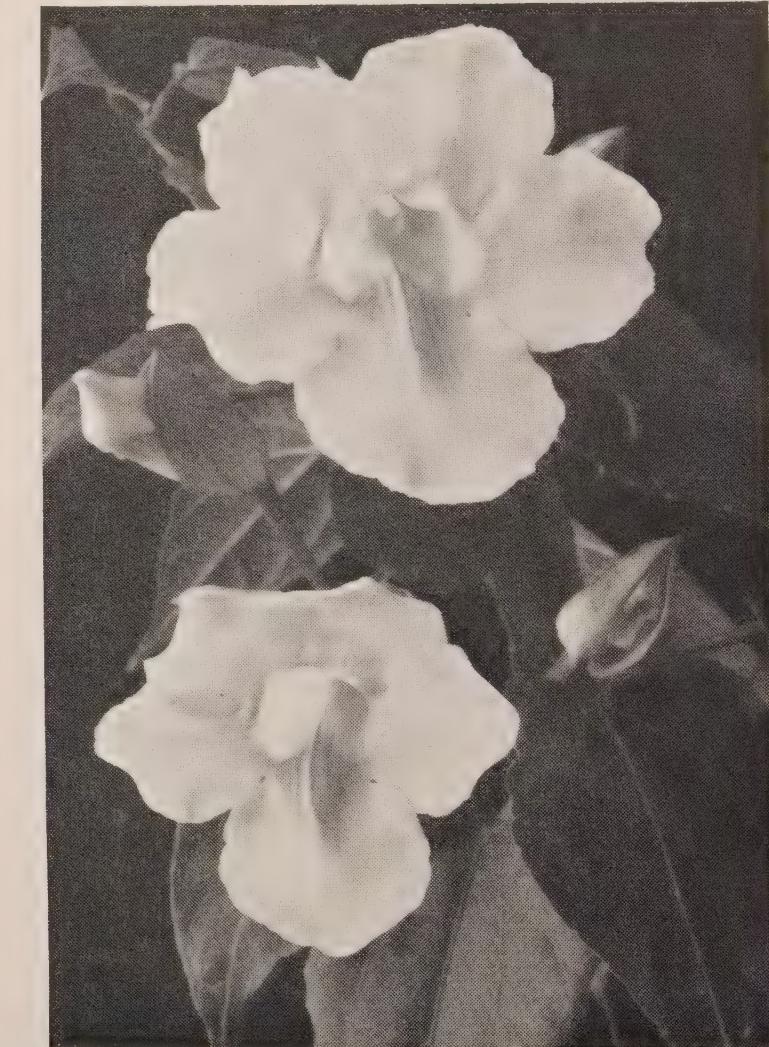

Blue Sky Flower

Thunbergia grandiflora. Dependable for a quick cover of lush foliage. The large trumpet-shaped flowers are a clear light blue with white throats. Plant in a sheltered place in areas subject to hard frosts. Gal. 90c, 5-gal. \$3.50.

Wistaria

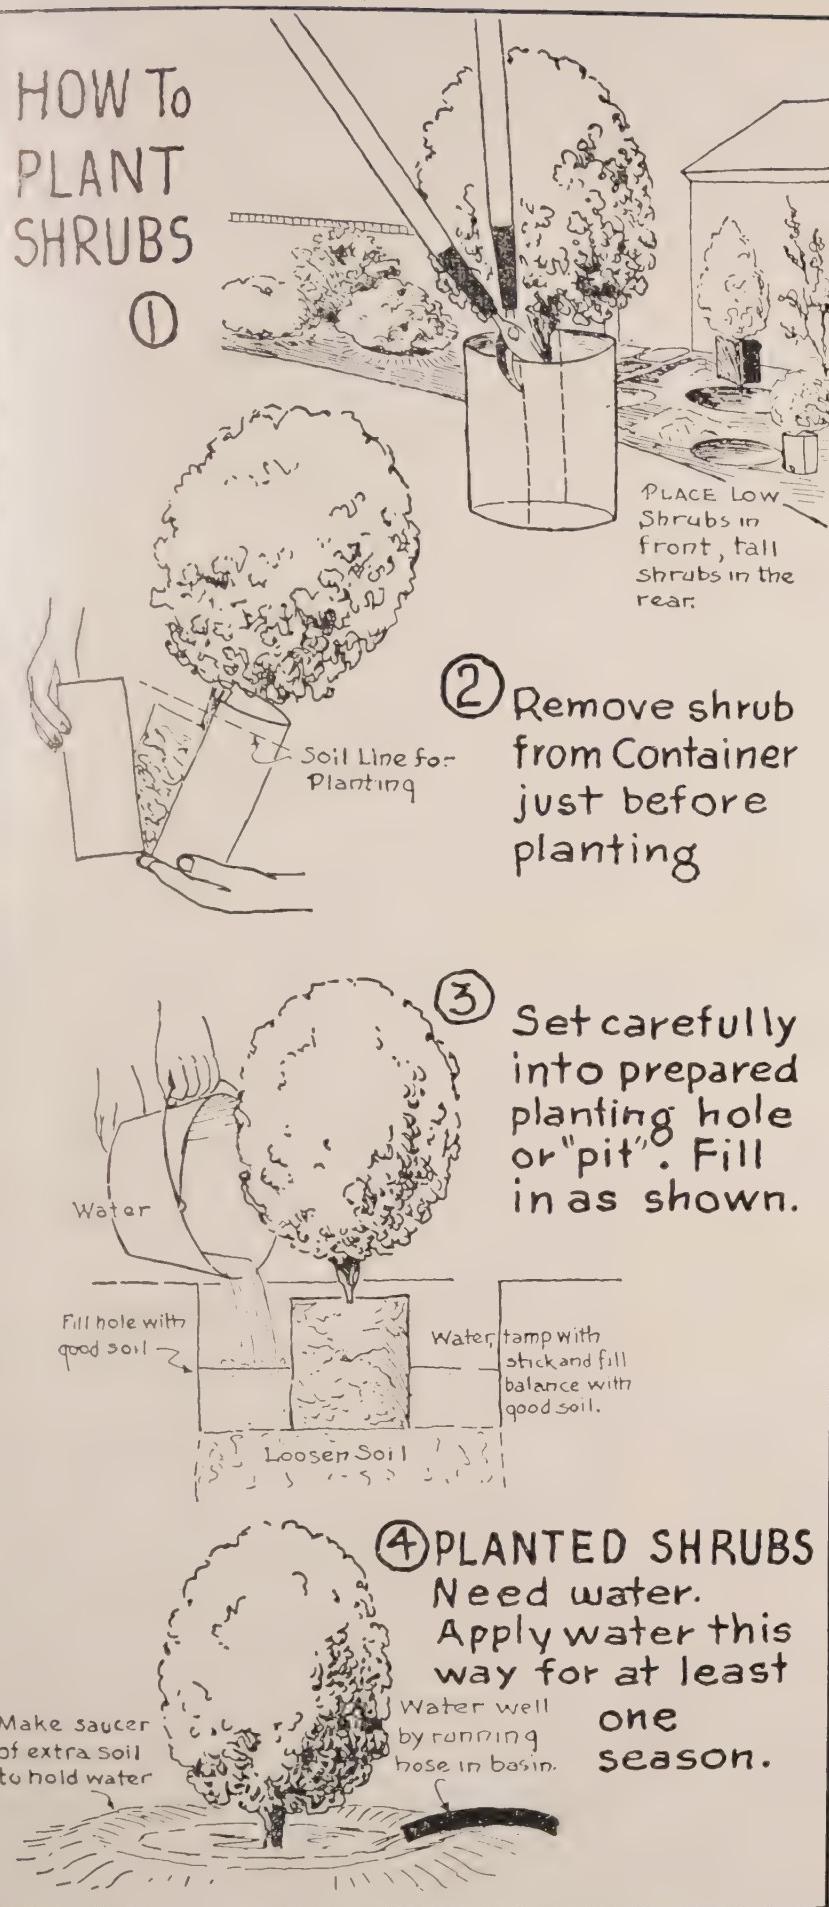

We don't have to describe this well known hardy vine for its long clusters of fragrant and unique blue flowers are known all over the country. It makes a large growth and so needs a substantial support.

Blue. Each, \$3.00 to \$4.00.

THUNBERGIA GRANDIFLORA

HOW To PLANT SHRUBS

Rosedale's Coniferous Evergreens

LARGER SIZES AVAILABLE AT THE NURSERY

Cedars

Cedrus deodara. Tall growing tree with wide spreading branches forming a tall cone shape. The branchlets with their bundles of soft grey-green needles hang gracefully. The popular plant for Christmast planting. **\$5.00 each.**

Cypress

Blue Lawson Cypress (Chamaecyparis lawsoniana alumi.) Blue form of this hardy native making a close growing specimen for places requiring a taller plant. Seldom over 10 feet high and arriving at this height slowly. Always attractive. **Gal. 75c, 5-gal. \$3.30.**

Golden Lawson (Chamaecyparis stewarti). New growth a lovely golden yellow, as attractive as the Blue Lawson. **Gal. 90c, 5-gal. \$3.50.**

Forbes Cypress (Cupressus forbesi). With the spreading of the fatal fungus in Monterey Cypress, we believe it unwise to further distribute Monterey Cypress and instead suggest planting Forbes Cypress. It has the same habit of growth, makes an excellent fine textured hedge, medium or large, and is immune to the disease. **Gal. 70c, 5-gal. \$2.85.**

Blue Italian Cypress (Cupressus sempervirens glauca). A stunning variety—tall, narrow, compact growing, as fine a plant as the Royal Italian, but a beautiful steel blue becoming even lovelier and bluer in cooler weather. **Gal. 90c, 5-gal. \$3.85.**

Junipers

Pfitzers (Juniperus pfitzeriana). Popular all over the country in heat and cold, this favorite is equally at home. A low-spreading shrub with fine small soft needles. Excellent ground cover or as a low accent. **Gal. 75c, 5-gal. \$3.50.**

Chinese Column (J. chinensis columnaris). Tall, close growing specimen evergreen. 10 to 15 feet, not nearly as tall as the Italian Cypress, and slightly thicker in diameter. Excellent grey-green foliage. **Gal. 95c, 5-gal. \$3.85.**

Sabina tamariscifolia. The best low-growing juniper. Slow-growing, making a dense cover over the ground seldom higher than 10 or 12 inches. In appearance much like a dwarf Pfitzer juniper. For ground cover, or in front of shrub plantings about the house. **Gal. 90c, 5-gal. \$3.50.**

Torulosa, Hollywood Juniper. The most unusual Juniper with twisted, gnarled stems assuming unusual shapes without training. Deep green, fine textured foliage, always close and neat. **Gal. 95c.** Larger sizes available. **Priced at the nursery.**

Incense Cedar

Incense Cedar (Libocedrus decurrens). Tall compact pyramid of deep green, having a shape roughly like a pointed egg when mature, being broadest about a third the way up. Leaves shiny green and fragrant. At home anywhere and frequently seen as a street tree. Native to California. **Gal. 75c, 5-gal. \$3.50.**

Pines

The fragrance of Pine is nostalgic to all lovers of the outdoors, as memories of delightful camping trips where the scent of pine contributed much to the enjoyment. These pines are quick-growing and can, if desired, be cut and used for fuel when large enough.

Canary Island Pine (Pinus canariensis). Long graceful needles. A beautiful tree, easy and fast-growing. **Gal. 70c, 5-gal. \$2.85.**

Monterey Pine (Pinus radiata). Tall, bushy, globe-shaped head of deep green. The fastest growing of all pines planted in California. Native. **Gal. 70c, 5-gal. \$2.85.**

Fern Pine

Podocarpus elongata. With fern-like foliage, the first impression one gets of this beautiful shrub is that it should have flowers and certainly must not be a conifer. For background plantings particularly in shaded places, or an excellent plant for growing in tubs. **Gal. 90c, 5-gal. \$3.50.**

Redwood

Redwood (Sequoia sempervirens). The tall narrow form of Redwood, with its gracefully pendant branches of deep green shiny needles and russet-red bark makes it a specimen tree for many places. It is surprising how well it grows here—always neat and tidy, keeping its restricted narrow spread. **Gal. 75c, 5-gal. \$3.30.**

Arborvitae

Berckmans Golden (Thuja aurea nana). Dwarf, globular shaped shrub with close-growing fern-shaped branchlets standing on edge and bright golden yellow at all times. **Gal. 95c, 5-gal. \$3.85.**

Beverly Hills (Thuja beverleyensis). Slender growing type with golden foliage. **Gal. 75c, 5-gal. \$3.50.**

Bonita. Green foliage making a globe-shaped plant. **Gal. 75c, 5-gal. \$3.50.**

Buy Rosedale's Selected Citrus Trees

Delicious Oranges . FOR LARGE AND SMALL PLANTINGS

Whether you are planting a small or large orchard or only a single specimen or two, it will pay to select your trees at Monrovia Nursery. We offer only top quality trees from the most reliable grower in varieties popular for quality and flavor.

The orange is among the best known of all warm climate fruits as a source of delicious, health-giving juice and fruits for salads. To get the best quality fruit from your planting, plant correctly and give the best care—regular watering, cultivation of the soil under the branches; fertilizing and spraying to keep free of scale.

As an ornamental tree—the orange rates very high—deep green lustrous foliage covering its rounded form from the ground up and in its season, the luscious fragrance of blossoms perfumes the air. Orange blossom honey is one of the choicest types there is, if you keep bees.

Monrovia's Selected List of Oranges and Tangerines

Temple Orange. We recommend this orange for those who like sweet, delicious juice. Fruits round, thin skinned, of the Valencia type; medium size with few seeds but just full of deep orange fine flavored juice. Heavy bearer. **Each \$5.25.**

Valencia. Smaller sized fruits, but very fine flavored, although containing a few seeds, making high quality juice. Thin skinned fruits are easily juiced. Makes a large tree. May to fall bearing. **Each \$4.85.**

Washington Navel. The most popular winter ripening orange. Large, seedless fruits unexcelled for flavor, juice and general high quality. Peels easily and sections can be separated readily without breaking. Fruits ripen from December to April. **Each \$4.85.**

Robertson Navel. A development of the Washington Navel of special interest to the home gardener whose demand for fruit is large. The Robertson Navel has the same

quality seedless fruit but produces larger crops even while quite young. Smooth, uniform, medium-size fruits. December to April. **1 yr. \$4.85, 2 yr. \$6.25.**

Tangerines

Algerian. Very sweet, medium-size fruits, deeply and richly colored. Very early ripening. Dark green foliage, and compact growth make this an ideal ornamental. **Each \$5.50.**

Dancy. Beautiful, large thin-skinned fruits, easily peeled and containing a wealth of tasty orange-red segments. **Each \$5.50.**

Satsuma. Hardy for a citrus, this variety does well in most places. Fruits are flattened, with a looser skin covering the tasty orange-red juicy segments. One of the earliest tangerines to ripen, often before Christmas. Small neat tree, 10 to 12 feet high and a good bearer. **Each \$5.50.**

Suggestions for Using Oranges in Home Plantings

Oranges make an effective screen or barrier at the back of the lot or along a noisy street. Plant so the fruit may be easily picked—say 15 to 20 feet apart, or closer with the reservation that alternate trees will be removed when crowded. Fruit forms on the ends of the branches, so they will not stand shearing and still bear.

Protect newly planted trees with special tree protectors to keep hot scorching sun away from the bark. Older trees naturally protect themselves in deep shade by the low set branches. Never prune citrus except to keep the shape. Prepare planting holes well and feed regularly with a standard citrus fertilizer.

LEMONS, LIMES, GRAPEFRUITS

GRAPEFRUIT — A Summer Treat!

Best in the hottest areas with irrigation. We do not recommend them for coastal planting. For such areas, it is wiser to plant oranges and other citrus.

Marsh Seedless. Large, practically seedless fruits, thin-skinned and juicy. Makes a vigorous yet compact tree, bearing heavy crops May to August. **Each \$4.85.**

Thompson Pink. A splendid seedless grapefruit of the same high quality. Juicy, sweet, pink-colored flesh. **Each \$4.85.**

Lemons

For all types of planting—they produce quality fruit under most conditions. Even the dwarf Meyer Lemon gives quality lemons.

Eureka. Although this high quality lemon is extensively planted commercially, it is one of the best for home planting, producing high quality, juicy medium-sized fruits. Trees practically thornless. **Each \$4.85.**

Meyer. Lemons are slightly less hardy than oranges except the Meyer, which stands considerable cold. Fruits of the same quality but larger and juicier; a beautiful ornamental tree for the home garden. See also the dwarf form under Dwarf Citrus. **Each \$4.85.**

Limes

Bearss Seedless. Large richly flavored acid fruits are produced in quantity on this large vigorous tree. Practically thornless and summer ripening, it has all the qualities one could ask for in a lime. **Each \$4.85.**

Mexican. Small, light green fruits are strongly acid and richly flavored. Semi-dwarf tree bearing the year around. **Each \$4.85.**

Sweet Lime. Large growing quite hardy lime. Fruits are really sweet and therefore can be used for juice without adding sugar. Bears enormous crop of large, yellow juicy fruits. **Each \$4.85.**

Limequat

Limequat. A small rapid growing tree with arching branches, producing good crops of fruits like a small yellow lime. Hybrid between Lime and Kumquat. Makes an excellent flavored ade. **Each \$4.85.**

Kumquat

Kumquat, Nagami. Semi-dwarf tree or large shrub of considerable ornamental value. The small deep green foliage makes a beautiful shrub and stands shearing well. The fruits are long and narrow, quite tasty but best used for marmalades for which it is best known. **1 yr. \$4.85, 2 yr. \$6.00, 3 yr. \$7.00.**

Tangelo

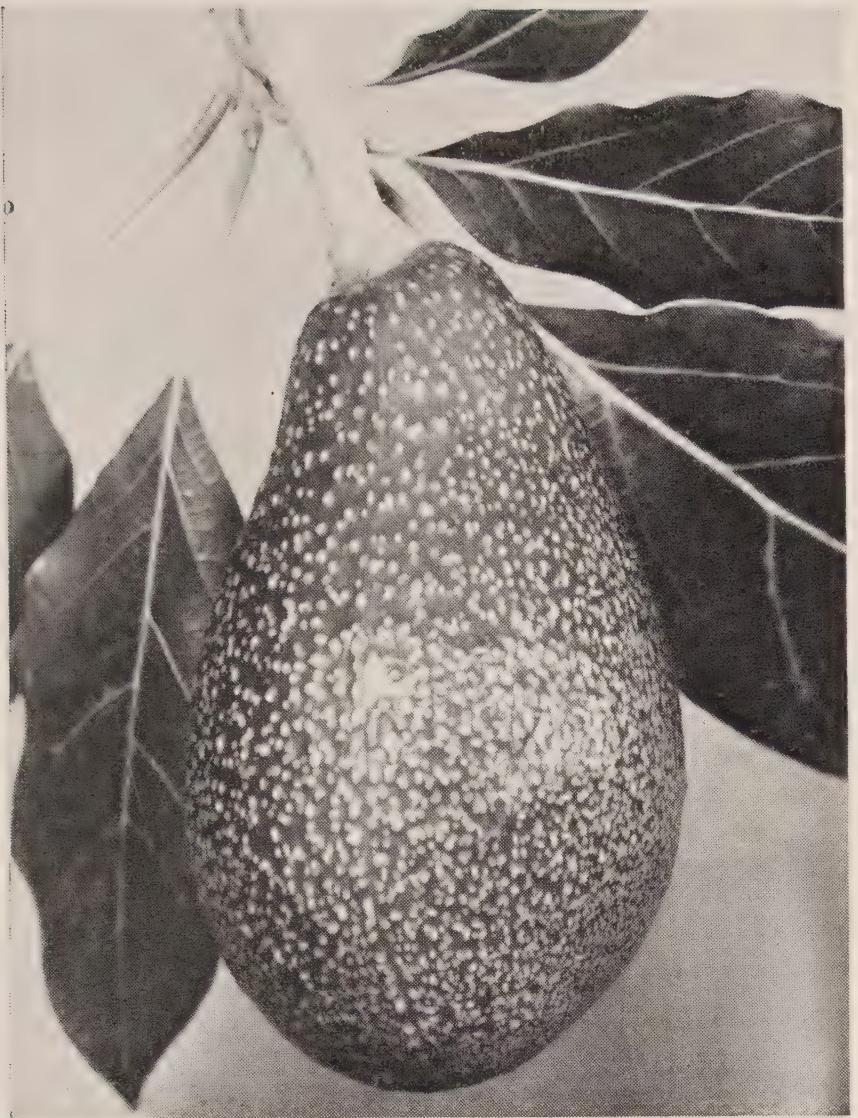

Sampson. Most popular of all the Tangerine-Grapefruit hybrids and very easy to grow. A very unusual citrus for home planting. Just as hardy as the orange and heavy bearing, too! Fruit golden yellow with a smooth skin like a grapefruit but the flesh is orange-red, possessing a delightful flavor. Excellent for juice when fully ripe in early spring. **Each \$4.85.**

See Dwarf Citrus, Page 27.

GRAPEFRUIT

Rosedale's Avocados and Subtropicals

The home fruit garden in Southern California is not complete without some of these highly desirable "different" fruits. Everyone knows the avocado for its popularity has spread rapidly in recent years, but about the only way you can enjoy such rare treats as Custard Apple and Sapote is to grow them at home. All of these are evergreen trees, quite adaptable to the home landscape plan, useful for their foliage, small stature and shape for many ornamental purposes.

The fruits of all subtropicals cannot be picked and eaten at once. Rather, they should be picked and stored a few days in a cool, dark place, preferably wrapped in newspaper until they ripen. Then chill in the refrigerator and serve.

AVOCADOS

The rise in popularity of Avocados, from a rare delicacy to a common every-day item of food is remarkable. Plant one or more trees in your garden—enjoy their cool deep shade and select them for their ripening season so as to extend the time you will be furnished with their fruits. We give the approximate ripening period for all varieties.

Duke. A fine quality thin-skinned Avocado. It has quantities of deep green fruit, resembling small Fuertes, but larger than most thin-skins, during September and October. The tree is large and vigorous, bearing very large crops. Duke is quite hardy and enjoys wide popularity over a considerable area of California. **\$5.75 each.**

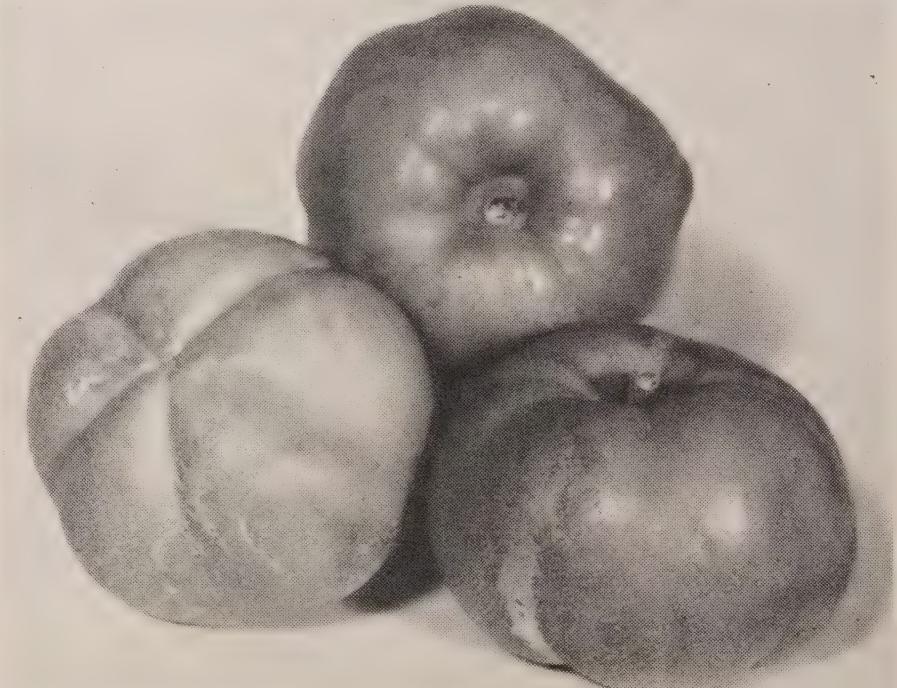

Edranol. An excellent variety—exceptionally delicious, pleasantly flavored fruit. Medium size pear-shaped and dark green with a thick skin enclosing the smooth buttery flesh. This is a tall narrow-growing tree, best along the coastal area, yet harder than most thick-skinned kinds. May to August ripening. **\$5.75 each.**

Fuerte. A large spreading evergreen tree of considerable ornamental quality, but the fruits have become the standard by which Avocados are judged. Long pear-shaped fruits with a smooth, leathery green thin skin and delicious buttery flesh, creamy-yellow when ripe, has few equals for quality. Ripens from December to May. **Each \$5.75.**

MacPherson. (Pat. 433.) Like Fuerte in appearance, the medium to large green pear-shaped fruits are thin-skinned. Salads made with MacPherson Avocados are lovely indeed for the fruit has a reputation for its delicious yellow buttery flesh. **Each \$6.75.**

Ryan. Large spreading tree bearing heavy crops of medium-sized pear-shaped green fruits of good quality. It follows the Fuerte in ripening, May to October. **Each \$5.75.**

Custard Apple - Cherimoya

The large heart-shaped fruits of Cherimoya are one of the best flavored of subtropical fruits. Recent advertising of "Pliofilm" for preserving delicate fruits has promised the availability of Cherimoya among many others, but why wait for so uncertain a prediction, for they are readily grown in frost-free areas with little care. Cherimoyas make a neat, round-headed small tree and require the same treatment as Citrus.

Whaley. This variety has the largest fruits of all, some weighing around 2 to 3 pounds. We consider this to be one of the finest for flavor—the creamy, smooth white flesh is eaten with a spoon and is so finely flavored as to defy description. Winter ripening. **Each \$6.75.**

FUERTE AVOCADO

PLANT AVOCADOS FOR YEAR-'ROUND FRUIT

Proper choice of suitable varieties will extend the season of this nutritious salad fruit.

Ripe in Spring—**Edranol.**

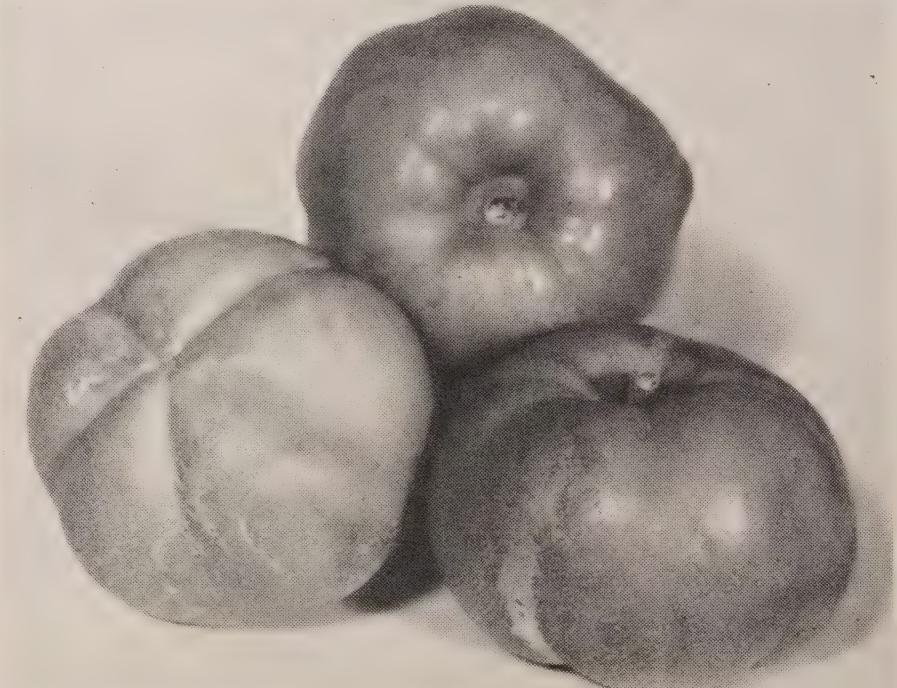

Ripe in Summer—**Ryan, Edranol.**

Ripe in Fall—**Duke, McPherson, Ryan.**

Ripe in Winter—**Fuerte.**

WHITE SAPOTE

Suebelle. A strong growing evergreen tree, the fruits much like green apples, but with the rich flavor of peaches. This is the best variety and perhaps the hardiest, being grown wherever oranges are hardy. **Each \$6.75.**

WHITE SAPOTE FRUITS

Rosedale's Fruits, Nuts for Home Planting

(PEDIGREED STOCK)

Many trees grown generally for the fruits they give our table are equally beautiful in the garden, for the bloom is often comparable to that of purely ornamental varieties. Peaches, cherries, apples, quinces, apricots, and pomegranates are useful for their flowers; persimmons for their large showy fruits. They can be used any place a flowering tree is used; as backgrounds, sometimes with branches hanging over a wall, or in groves where they will not only beautify your garden with flowers and picturesque habit but will provide delicious fruits as well.

ALMONDS

Price, each, \$1.85.

Distinctly a California product, they are a good investment in frost free localities, where dry summer heat prevails. All varieties must be cross-pollinated in order to bear a good crop. We suggest planting a Ne Plus Ultra to pollinate Jordanolo.

Jordanolo. New heavy-bearing variety, well adapted to our climate. Nuts are long, soft-shelled and produced in heavy crops. This makes a beautiful flowering tree with dense foliage, pretty flowers and decidedly high quality nuts. Plant the Ne Plus Ultra as a pollinator.

Ne Plus Ultra. Large long nuts with a soft coky shell. Nuts have a beautiful appearance. We recommend planting one of this variety for every four Jordanolo almonds to insure formation of fruits.

APPLES

The warm climate in Southern California is not kind to apples and only a few varieties will do well. These happen to be the yellow types and we offer the best of these. We do not recommend planting the late red winter apples.

Winter Banana. This shapely fruit is large, pale yellow with red blush. The flesh is crisp and tender. Trees come quickly into bearing and do well in most sections, particularly along the coast. September. **Each, \$1.85.**

Yellow Bellflower. Large oblong, ribbed fruits are a pleasing waxy yellow, often with a beautiful pink blush when the sun shines on them. One of the best varieties for cooking. October. **Each, \$1.85.**

CRABAPPLE

Transcendent. Large red-blushed golden yellow fruits, crisp and tender, appear during August. They make the finest jelly, preserves and spiced fruit. It is a handsome ornamental with good foliage and lovely bloom in spring. **Each \$1.85.**

Prices of Deciduous Fruits are for Bare Root only.

APRICOTS

Each \$1.85, except where noted.

Few deciduous fruits are so well adapted to home planting as are Apricots. They ripen early in the season well before other fruits of this class and home grown fruits are a special treat—picked ripe and full of goodness from your own trees. They are excellent for eating fresh or preserved either alone or with other fruits. Apricots have a tendency to set heavy crops and better size and quality can be had by deliberately thinning fruits after the crop has set.

Goldbeck Perfection. This marvelous apricot should be in every garden. The luscious fruit of this small tree cannot be surpassed for flavor, color and ripening quality. Delicious rich golden-yellow flesh. Fruit is very large, averaging 2 inches in length. Bears consistently every year. **Each \$2.25.**

Royal. Heavy bearing, good size fruits. Rich sweet deep orange flesh. Excellent for home use. Early June.

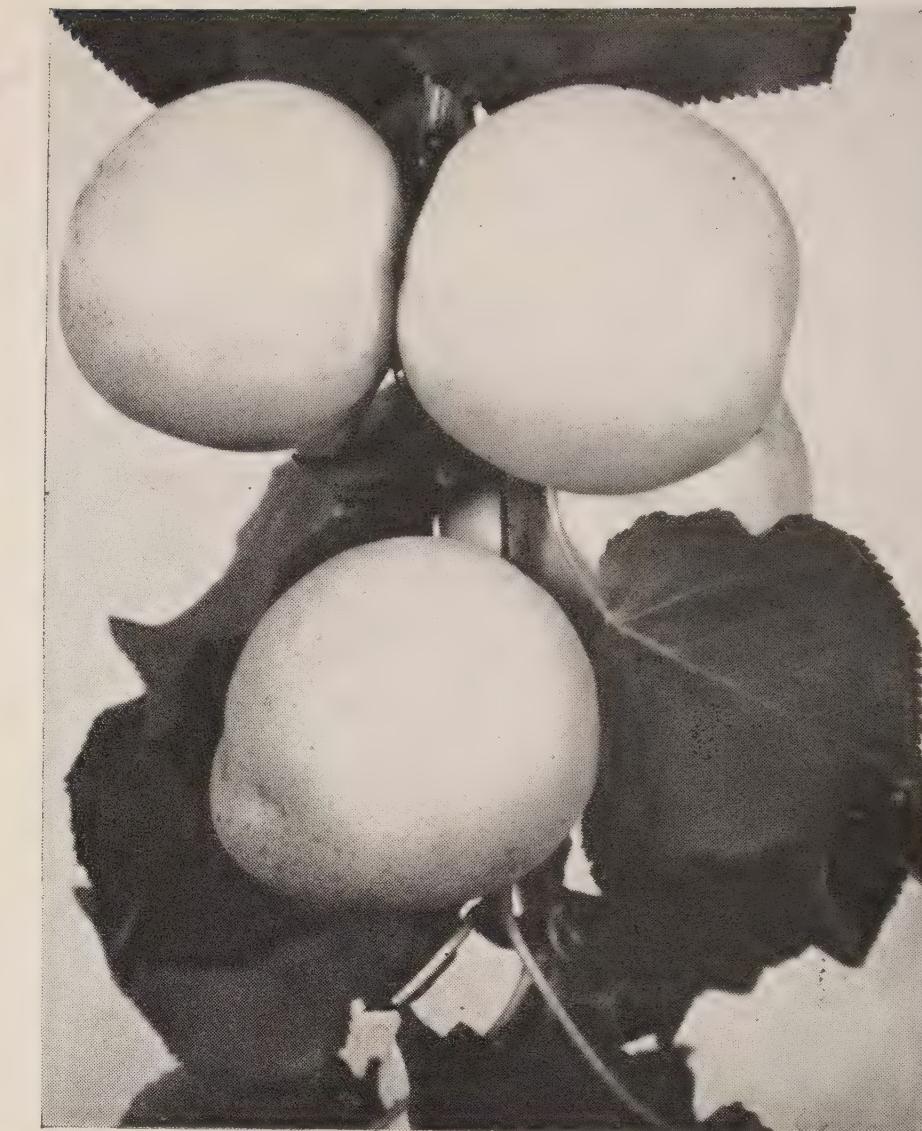

Moorpark. Extra large highly colored fruits. One of the best flavored and most delicious.

Tilton. One of the latest apricots to ripen. Endures heat very well. Produces quantities of richly colored, heart-shaped fruits. **Each \$1.85.**

CHERRIES

English Morello. Fruit dark red, almost black when ripe, makes excellent pies. This cherry is a small round headed tree, useful as an ornamental for its spring blossoms. **Each \$1.85.**

Royal Anne. Excellent fruit—large, light amber suffused with red. A very popular cherry especially for canning. **Each \$1.85.**

GOLDBECK PERFECTION APRICOT

FIGS

Price of Fig Trees—**Each, \$1.85.**

Figs are very desirable fruits for home planting for they reach perfection without much fuss and bother. Because they are delicate fruits to handle, bruising easily, they are at their best grown at home and picked fresh as needed.

Brown Turkey. A very fine fig—purple brown skin when ripe, enclosing very delicious soft white flesh with pink interior. Very large fruits in abundance. Prune heavily in winter.

Kadota. The small yellow green fruits of the Kadota fig are extremely rich and sweet. Best for preserving of any variety. Ripe summer and fall, not necessary to prune.

Mission, California Black Fig. Purple-black fruits with tasty brownish flesh. Leave trees unpruned.

Rosedale's Select Peaches for Home Planting

Peaches are an all around useful tree for home planting. Few others do as well, so freely setting their luscious fruits with so little trouble. The trees bear well even while small, and never get very large. Ever pick peaches fresh from your own tree? If you have, you understand our enthusiasm for this choice fruit. If not, you have one of the greatest pleasures in store for you.

There are two types of peaches, "clingstone" in which the stone adheres to the flesh when the fruit is cut in two, and "freestone" which does not. Clings are the finest for home canning, presenting a tempting color and possessing a rich flavor. Freestone peaches are best for eating fresh, although they can well, too. The yellow varieties are best for canning. The peach season begins with Mayflower in May and ends with Kummel in October. Thus selections can be made to have peaches fresh in the garden long before and after they are on the market.

CLINGSTONE PEACHES

Price of Peach trees—Each, \$1.85.

Peaks Cling. Superior quality fruit—large, uniform in size and round with clear golden yellow skin. Deep yellow, firm flesh, sweet and tasty. Small stone, heavy bearing in mid-August.

Orange Cling. Large orange-yellow fruits with deep yellow colored flesh for canning. This variety is the best for this purpose. Late August.

Sims Cling. This fine quality peach bears consistently good crops each season. Golden yellow fruits, larger than average and of excellent quality to the pit. Late August.

FREESTONE PEACHES

Except where noted, prices of following, \$1.85 each.

Australian Saucer. Oddly shaped saucer-like peaches about 3 inches across and less than one inch thick with a small round stone, but for flavor the sweet, juicy white flesh is very fine. One of the showiest trees for early spring flowers—beautiful deep pink. June.

Babcock. Although not a large peach, the Babcock is the finest for Southern California, particularly in home gardens. The trees, usually small in size, bear prodigious crops year after year, often so heavy that thinning is often necessary to give larger fruit and prevent breaking of the tree. Fruits delicious, richly flavored white flesh. Attractive on the outside with their lovely deep red cheeks. Late June.

C. O. Smith. Another consistently good bearer and a wonderful peach for home use. Fruits larger than Babcock with richly flavored, juicy white flesh. Late June.

Early Crawford. A fine early yellow fleshed peach. The very large round fruits are richly colored red and yellow. Flesh deep yellow with red rays from skin to pit. Rich flavor, pleasing aroma and very juicy. Late July.

Rosedale's Improved Elberta. Almost round medium size fruit. Skin yellow with deep red cheek and a beautiful orange cast to the skin. Excellent firm yellow flesh very delicious. Bears good crops each year. Mid-July.

Elberta. An old favorite, well known wherever peaches are grown. It has fine large oval shaped fruits—yellow with red cheeks and juicy, yellow, fine flavored high quality flesh. Early August.

Fisher. (Pat. 233.) New high quality yellow fleshed peach similar to Elberta but ripening six weeks earlier. Excellent smooth texture and rich "peachy" flavor are its outstanding qualities. **Each, \$2.25.**

Indian Blood. One of the most unusual appearing peaches and unusually delicious sliced and eaten fresh. The deep red flesh is very tasty—the skin very dark and covered with a thick greyish almost woolly fuzz. Fruits of medium size, and round in shape. Late August.

J. H. Hale. Large round fruits very beautiful to look at and delicious to eat. Beautiful yellow skin, marked with deep red. Very popular and excellent quality. Bears well except after very

Mayflower. Really semi-freestone this, the earliest ripening peach on our list has medium-sized creamy white fruits mottled with dark red. The flesh is white, juicy and tasty. May—just ahead of Australian Saucer.

Millers Late. The best quality late ripening peach. Heavy bearing and ripe in October and November almost to Thanksgiving. Fruits large, with tasty yellow flesh.

RIPENING CHART FOR PEACHES

Month

May—Mayflower.

June—Fisher, Nectar, Babcock, C. O. Smith, Australian Saucer.

July—Rosedale's Improved Elberta, Early Crawford.

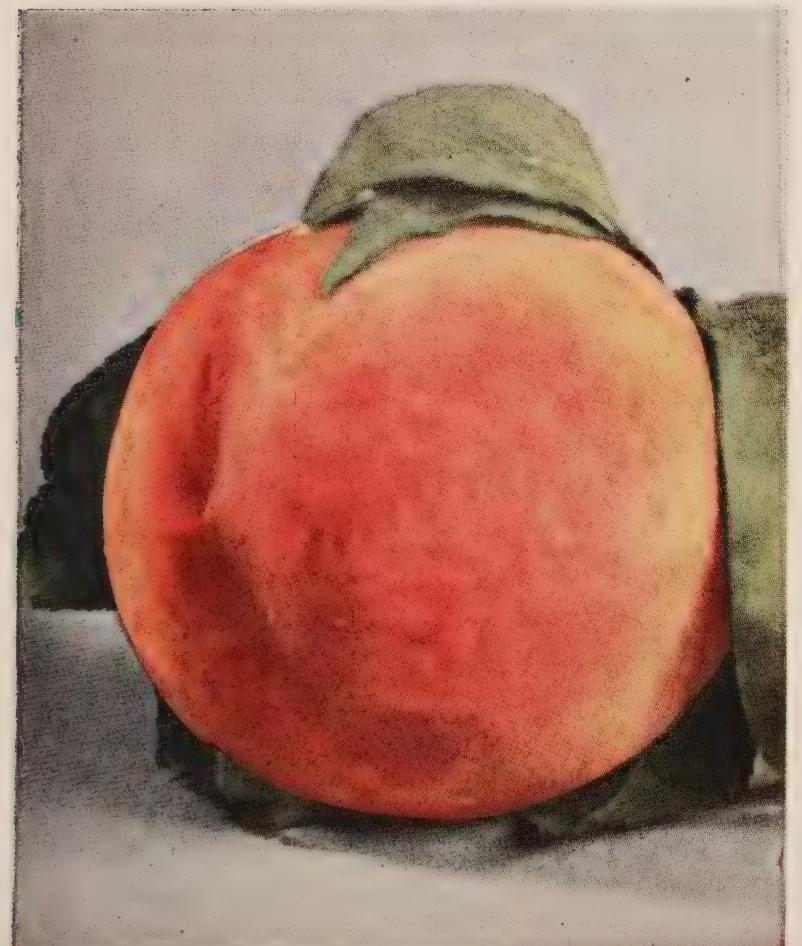

August—New Cal, Rio Oso Gem, J. H. Hale, Indian Blood, Elberta.

October-November—Miller's Late.

NECTAR PEACH

RIO OSO GEM PEACH

THREE TOP NOTCH PEACHES

For Home Orchard Planting

Nectar Peach

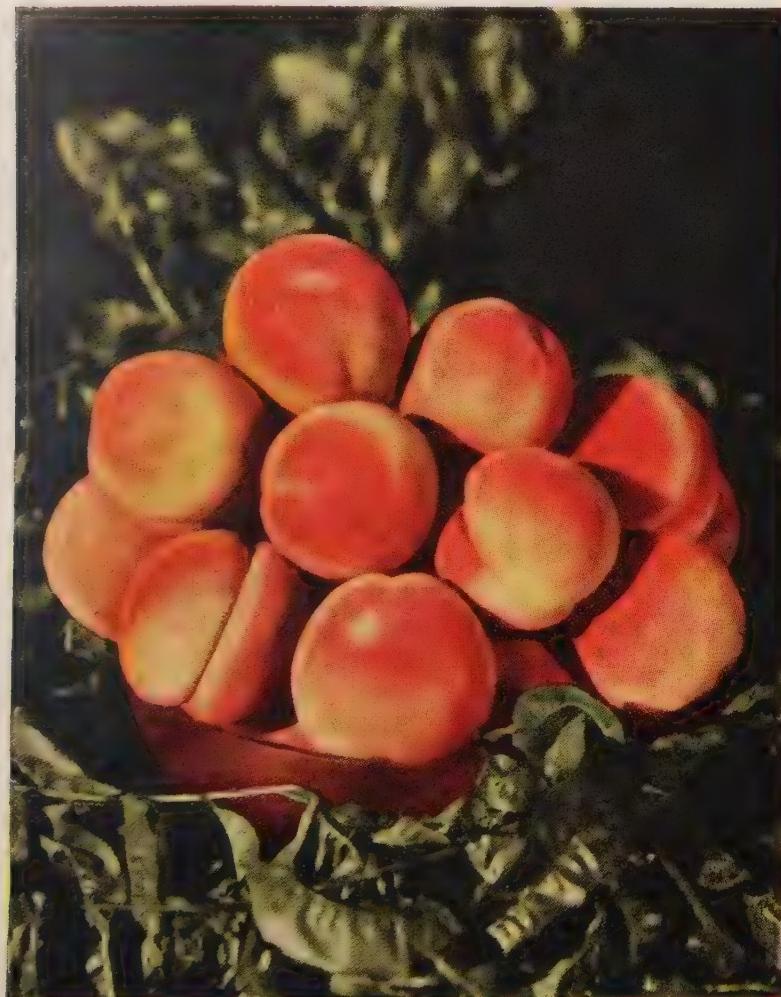

Nectar. (Pat. 86.) One of the finest white fleshed peaches. Large beautifully colored fruit with firm flesh decidedly Nectarine flavored with a pleasing aroma. Skin almost without fuzz. **Each \$2.25.**

Newcal Peach

Newcal. New. Heavy bearing peach of the Elberta type, bearing the second year after planting. Fruits medium sized and oval in shape. Yellow flesh. Mid-August. **Each \$2.25.**

Rio Oso Gem

Rio Oso Gem. (Pat. 84.) Large round peaches with deep crimson cheeks and richly flavored yellow flesh. On the order of J. H. Hale, ripens two weeks earlier and finer than that variety for Southern California. **Each, \$2.25.**

FISHER PEACH

NECTARINES

Price of Nectarines—Each, \$1.85.

Nectarines are peaches with smooth fuzzless skins. All have white flesh and are delicious either fresh or canned. Slightly sweeter than the peach and considered by some to have a better flavor.

Gold Mine. Large red and yellow fruits. The juicy white flesh has exceptionally fine flavor. Early August.

Gower. Fruits large and round, pale green with deep red blush. Flesh white, sweet and juicy—firm enough for canning. Early June.

Quetta. The only clingstone Nectarine we list, but the large fruits are highly colored with red; very beautiful in appearance. Flesh firm, a good canning type. Late July.

Stanwick. Very large fruits with pale green skin shaded with purplish-red. Flesh white, juicy and deliciously aromatic. Early August.

GOWER NECTARINE

MEYER LEMON

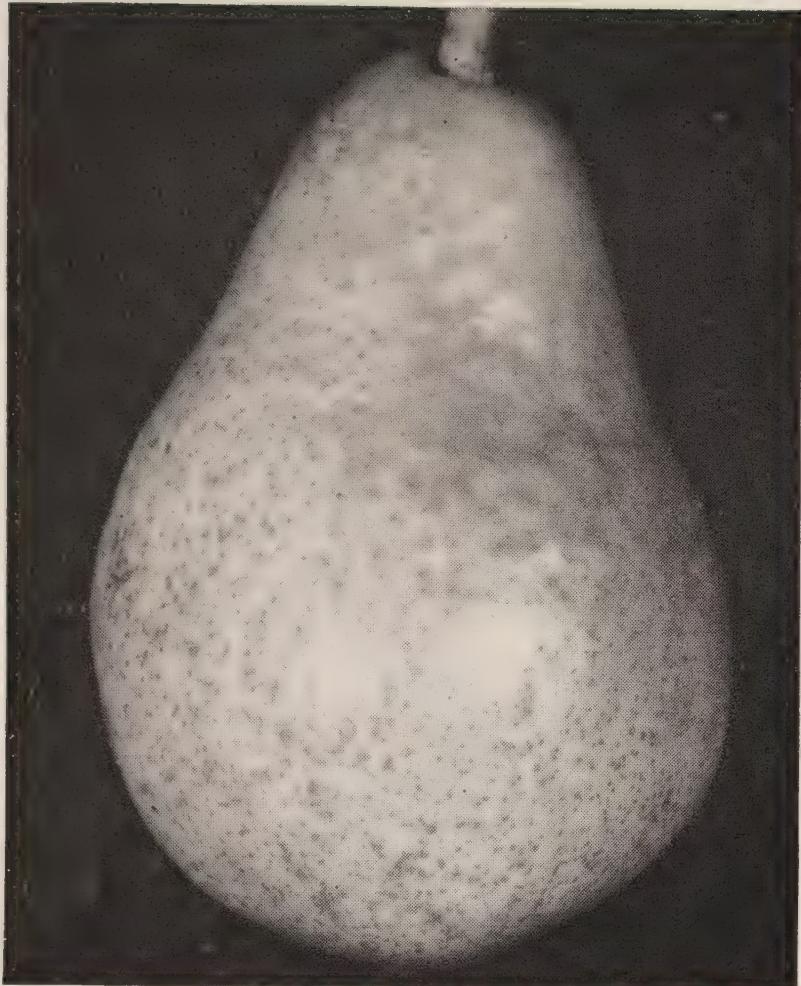

Dwarf Citrus Fruits

This group of small shrubs is both ornamental and useful. Fragrant bloom, handsome foliage and yellow or orange fruits, together with their dwarf bushy habit make them ideal for planting either in the ground or in tubs.

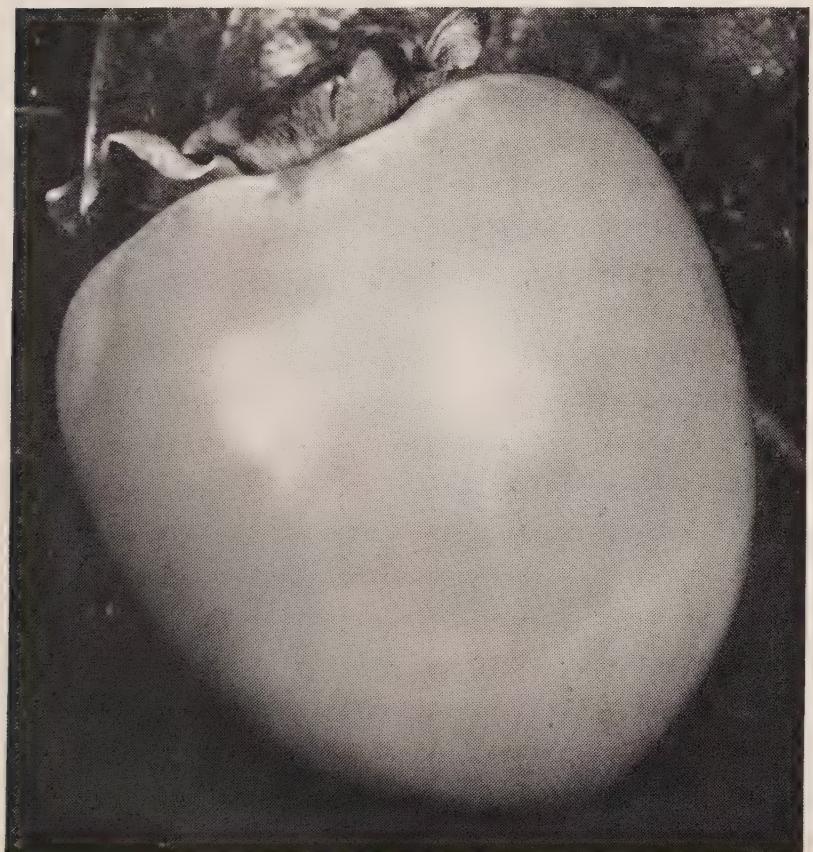

Meyer Lemon. One of the best plants to serve both as an ornamental shrub and as a source of fine lemons for culinary use. Dwarf in habit, it is constantly covered with fragrant lavender and white blossoms and maturing fruit. **Gal. 95c, 5-gal. \$4.50.**

Otaheite Orange. This dwarf orange is only of ornamental value. The small oranges have no edible value but are exceedingly attractive, small enough to be in keeping with the dwarf growth and small leaves. **Gal. 95c.**

Rangpur Lime. Low spreading shrub with fine foliage and small orange colored fruits similar in size and shape to those of the Otaheite orange but excellent in flavor and quality. One of the hardiest citrus. **Gal. 95c, 5-gal. \$4.50.**

BARTLETT PEAR

PERSIMMON HACHIYA

At Rosedale's — Only the Finest!

It pays to plant fruit trees grown from pedigreed stock. Our trees are budded from healthy, productive parent trees to guarantee satisfaction when your tree comes into bearing.

PEARS

Price of Pear trees—\$1.85 each.

Pears, delicious fruits for the table and canning, are not always good performers in mild climates. The two listed here are the most satisfactory. Fruits are better if picked just before they are ripe and allowed to ripen in a cool dark place. In this way they keep the smooth texture of the flesh.

Bartlett. Well known all over and one of the best for California. An especially good home variety with richly flavored flesh that literally melts in your mouth. Large fruits ripe about August.

Beurre d'Anjou. Fine large pear. Ripens in fall. Fruit has yellowish flesh with a rich and vinous flavor.

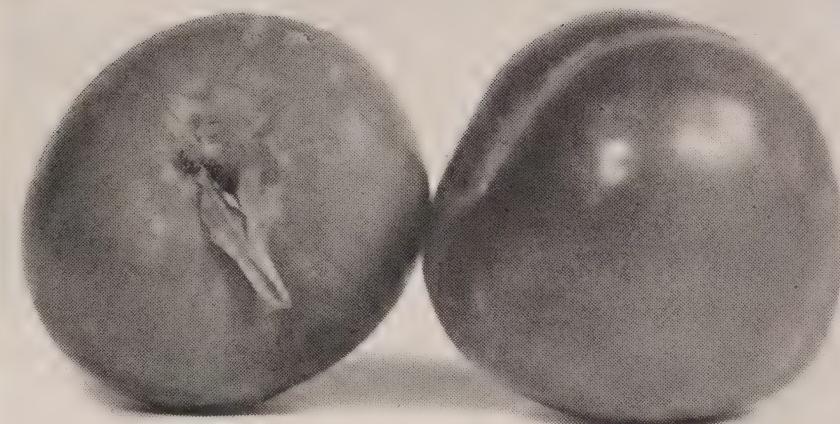

PERSIMMON

These glorious trees are a sight every fall in California when the leaves turn color and the large waxy bright orange colored fruits are ripe. The seedless pulp is eaten fresh or made into delicious spicy cake or steamed pudding.

Hachiya. Long the most popular persimmon. The flavor of the ripe fruit is sweet, rich and mellow and well worth waiting for the ripe stage. Very beautiful with its bright orange-red fruits.
4-5 ft. \$2.75; 5-6 ft. \$3.25.

POMEGRANATE

Wonderful. The pomegranate is the most ornamental of all fruits grown in California. The large bushy shrub has good foliage, always attractive with its small narrow yellow-green leaves, and bright red flowers all summer. The fruits which follow ornament both the shrub and later the table. When cracked open the fleshy, garnet-colored sections are a delight to salads and fruit cups. Pomegranates seem to do better in the hottest places.
\$1.85 each.

PLUM, GREEN GAGE

PLUMS

Price of Plum trees, \$1.85 each, except Monrovia, \$2.25.

To insure better crops of plums plant a tree of Beauty or Wickson to pollinate the other trees in your planting. Plums do well here, especially the blood plums, which are the best for eating.

Green Gage. Because this plum is so well known as an eating variety we are listing it. However, it is satisfactory only in the cooler parts or foothills. The fruits are greenish yellow, medium in size, and oval with rich, sweet, juicy flesh. Late August.

Duarte. Very fine blood plum. Fruits of good size, oval in shape and deep purplish-red in color. Flesh sweet and juicy, bright red. Ripens a few days before Satsuma in late July.

Monrovia. An improvement on the famous Satsuma plum. Very large blood red plum with delicious deep red flesh richly flavored and juicy. Ripens a week later than Satsuma in July. Bears consistently, and good crops too! **Each \$2.25.**

Santa Rosa. Large oval purplish-crimson fruits covered with a light blue bloom. The amber flesh is veined with crimson. This plum is a good pollenizer for other varieties as well as bearing a good crop each year itself. Late June.

Satsuma. One of the most popular blood plums but has to have another tree such as Beauty, Santa Rosa or Wickson to fertilize its flowers and insure a crop. Fruits large, almost round, deep red with firm, juicy, tasty blood-red flesh. July.

Wickson. Popular large heart-shaped plum. Color a pleasing straw yellow with bright red blush. The amber colored flesh is juicy and delicious. A good pollenizer for other plums. July.

RED STRAWBERRY GUAVA

Guavas

Guavas serve a dual purpose in the garden. They are shrubs possessing exceptional beauty of form, color of foliage, flowers and the fruits make delicious jelly of exotic flavor.

Lemon Guava. Tallest growing and producing the largest fruits, often 2½ inches across. Clear yellow. Gal. 75c, 5-gal. \$3.30.

Red Strawberry. Low compact habit of growth and bright red fruits about an inch across make an attractive hedge either sheared or growing at will. Makes a delicious bright red jelly. Gal. 75c, 5-gal. \$3.30.

Yellow Strawberry. Good sweet yellow fruits similar to the Red Strawberry. Prolific. Gal. 75c, 5-gal. \$3.30.

Pineapple Guava, Feijoa sellowiana. This shrub deserves wider use as an ornamental for its showy flowers in spring. Velvety white petals and clusters of bright red stamens are attractive. Fruits flavored of pineapple. Grey-green foliage is attractive in the background. Gal. 75c, 5-gal. \$3.30.

PRUNES

Price of Prune trees, each \$1.85.

Prunes are very much like plums. In addition to eating fresh they are dried for winter use. Many prefer fresh prunes to plums for eating quality. One of the noted sights of California is the prune orchards in bloom in February.

French Improved. This variety is widely planted for dried prunes. Fresh, the fruits are of good size, oval and deep purple with sweet, sugary flesh. Bears large crops ripe in September.

Sugar. Bears well in all sections and a good variety for home planting, fruits of good size, dark purple in color. Flesh very sweet and juicy; amber colored. Excellent for canning. Late July.

Tragedy. Very fine dark purple prune. Richly flavored yellowish-green flesh, sweet and juicy. One of the best prunes and excellent for table use. July.

QUINCE

Price of Quince trees, each \$1.85.

Dwarf trees performing well in all sections. The fruit makes excellent preserves and jellies. They have a high pectin content and are used extensively in jellies. Upon cooking, the color becomes a beautiful deep red.

Pineapple. Large round short-necked fruit, a beautiful golden yellow when ripe and at that time giving off an aroma of pineapple. Originated by Luther Burbank in his search for a quince that would become tender when cooked. September.

Smyrna. Beautiful tree as an ornamental bearing large round lemon-yellow quinces. Flesh of good quality, tender and very aromatic. October.

Perennial Vegetables

Rhubarb

An easily grown perennial plant. Set roots in soil enriched with generous supply of manure. Set plants 2 to 3 feet apart and allow to grow a season before pulling the stalks for cooking.

Cherry. Fine quality large bright red stalks. **Each 35c.**

Strawberry. Vigorous type. Stalks light pink. **Each 35c.**

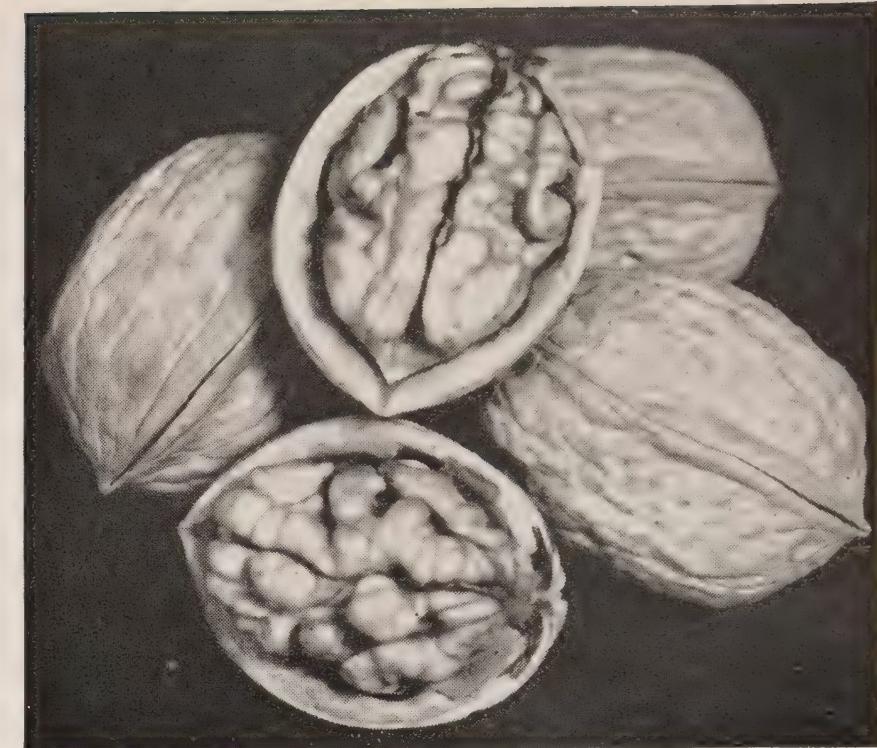

Artichoke

French Green Globe. Most popular artichoke. Perennial plant with very ornamental blue green foliage and during summer, the large flower buds are cut and cooked. If allowed to blossom, they provide pretty large blue flowers. Easy to grow. **Large divisions, 50c each.**

Asparagus

Paradise. Stalks large, thick green of excellent quality. Produces abundant crops early in the season. One of the best for home gardens. **25 for \$1.25.**

Mary Washington. Popular early variety. Stalks green, crisp and tender. **25 for \$1.00.**

WALNUT, PLACENTIA

WALNUTS

Walnut trees priced as follows: 6-8 ft. \$2.85 each; 8-10 ft. \$3.85 each; 10-12 ft. \$4.85 each.

The English or Persian Walnut, as it is more properly called, is one of the finest open-headed shade trees we have. The habit is more spreading than tall so that it needs ample room in which to grow. There is nothing difficult about growing walnuts, as good crops may be had each year.

Eureka. Popular variety with large, long meats. Shells are thicker, sealing the kernels within. Meats of high quality cream-colored, plump and of waxy texture.

Placentia. The best variety for Southern California. Oval shaped nuts with thin, smooth but strong shells. Has the advantage over Eureka in bearing heavier crops.

Dependable Fruits for Home Planting

Apricots

Plums

Figs

Grapes

Peaches

Victor Berry

ROSEDALE'S VICTOR BERRY

(Trade Mark Registered)

Now in their third season . . . these berries are the accepted champion of them all. They are entirely different in flavor, very sweet and extremely juicy. Victor Berries are practically thornless and may be picked without gloves. They are prolific bearers, rapid growers and their luxuriant foliage will quickly cover your fence or patio wall. Plant them for a new flavor treat either fresh or preserved. **Each 75c; 3 for \$2.00; 10 for \$6.50; 100 for \$50.00.**

Rosedale's Berry Bushes for Home Planting

Berries, as a group, are the most practical fruits for home planting. They require very little space compared to orchard trees, so that even the smallest garden can have at least one row of these productive bushes. They are best supported on low trellises, but if impractical, they can be trained on fences. The fruits are so well known that they are familiar to all as fresh fruits or in superb jellies, jams, juices and preserves. Home grown fruit is far superior to fruits that have been transported to market. Plant a row of berry plants this season.

BLACKBERRIES

Blackberries are among the finest fruits for jelly or eating fresh with sugar and cream. They develop stout canes which bear the season's crops; so allow plenty of room, or if trained on trellises, set plants farther apart, about 6 to 8 feet is ample. After the crop has been picked, remove the old canes close to the ground and rearrange the new growth on the trellis, for this produces the next crop.

All Blackberries, 25c each, 10 for \$2.00.

Cory Thornless. The Cory overcomes the chief objection to blackberries—the strong sharp thorns. With this one, blackberries are possible even in a small garden. Berries are jet black, sweet and small seeded.

Mammoth. Long stout canes with short, small spines and fruits similar to those of Cory, very sweet and almost seedless. Produces better crops if planted near Loganberry which will pollinate the flowers.

RASPBERRIES

For home gardens, set raspberry plants 2 to 3 feet apart in the row. Although they normally support themselves, a trellis of wood or wire, stretched between posts is desirable to keep the growths in place and make picking easier.

Cumberland Blackcap. Excellent small seeded glossy black berries. Firm, juicy, sweet and richly flavored. Of very good quality. Vigorous upright plants, bearing heavy crops. **25c each, 10 for \$2.00.**

Cuthbert. One of the best red raspberries with deep red luscious fruit. Sweet and fine flavored, ripening evenly over a long season. Tall, vigorous growth, fine foliage. **25c each, 10 for \$2.00.**

Sodus Purple. Large, very delicious, rich purple berries—juicy, sweet, richly flavored with a delightful aroma. Makes an excellent growth and comes into bearing the same season if set out early. One of the finest for pies, jams and jellies. **30c each, 10 for \$2.50.**

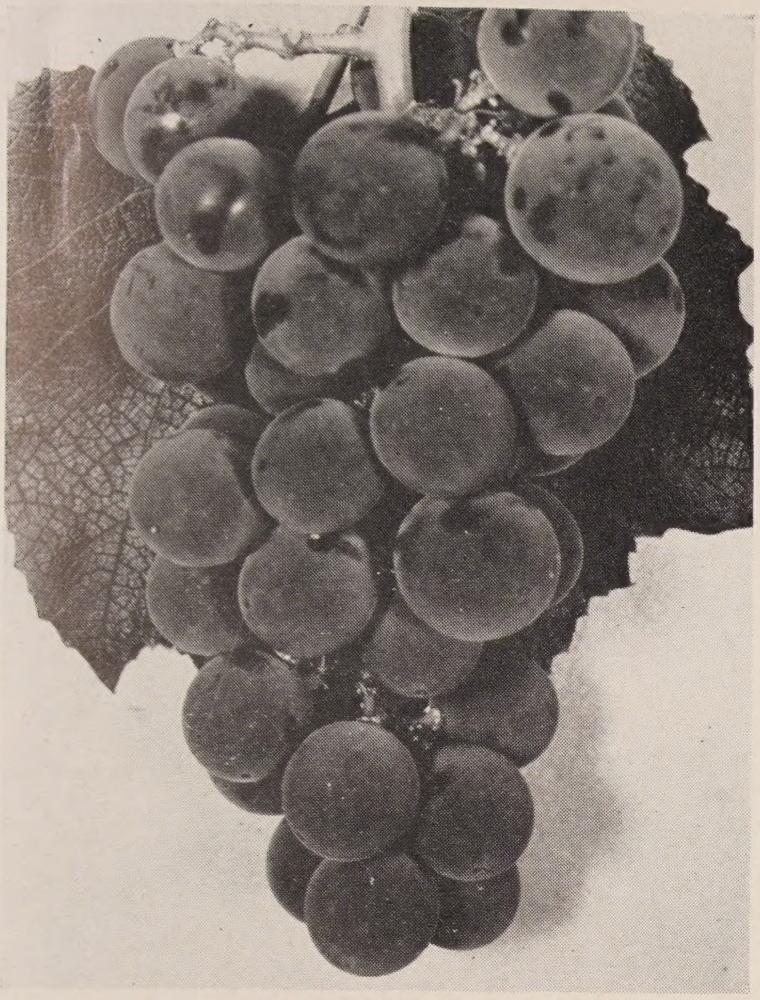

St. Regis. Fine red raspberry. Large delicious berries in good size clusters. Very fine quality. **25c each, 10 for \$2.00.**

BOYSENBERRY

Good sized berries, deep purple-black when ripe, wonderful flavor. Fruit combines blackberry, raspberry and loganberry, of which it is a hybrid. Excellent fresh or in pies, jams and preserves. The vines are vigorous and should be planted 4 to 6 feet apart. **Tips, 25c each, 10 for \$2.00. Transplants, 30c each, 10 for \$2.50.**

ST. REGIS RASPBERRY

CONCORD GRAPE

GRAPES

Both European and American grapes do well in California, and either are equally well adapted to planting in arbors or on stout trellis. In the field, European grapes are pruned back to a short trunk to give support to the heavy crops. Plants should be set about 6 feet apart.

AMERICAN GRAPES

Each, 50c.

Concord. Most popular blue grape for juice, jelly and preserves. Does well here, making an ideal cover for arbors. Fruits in small, well filled clusters, a rich deep blue. Flavor very fine, berries large. August.

Niagara. The finest white grape. In size and quality equal to Concord. Bears large crops of large, pale green berries which are delightfully sweet and tasty. August.

Black Monukka. Very fine black eating grape. Berries large, seedless, long like Thompson's seedless, in great loose bunches. Early August. **25c each.**

EUROPEAN GRAPES

Each, 25c.

Black Muscat. Popular black grape. Richly flavored large grapes are truly delicious. August.

Flame Tokay. One of the finest late grapes. Very long bunches. Fruits long and firm, rich red with lilac bloom. Quite distinct, for the flesh is firm, crisp and sweet. Keeps well after picking. October.

Red Malaga. Unusually delicious grapes. Deep red with blue bloom. Berries large, firm, sweet and richly flavored. August.

Ribier. Extra large grapes, almost round, blue black. Bunches medium size. Very sweet and richly flavored. August.

Thompson's Seedless. Very popular seedless white grape. Bunches very large, berries sweet and mild flavored. August.

White Muscat. One of the finest grapes for eating. Fruits large and oval, with a rich sweet flavor to the firm light amber colored flesh. Bunches large and loose. September.

Zinfandel. Large, compact bunches of round dark purple sweet berries, each coated with a heavy bloom. This grape has been extensively planted as a wine grape, but is also delicious for eating. September.

STRAWBERRIES

Delicious berries may be grown in almost any garden. They are dwarf, with beautiful foliage, making them excellent plants for edging paths in your vegetable or flower garden, or where space permits, in wider and large beds to serve as a ground cover. Set plants one foot apart each way.

Blakemore. Very fine quality early berry. One of the finest large berries offered. **10 for 60c, 25 for \$1.25.**

Gem. One of the best everbearing types. Berries large, beautiful, bearing fine crops after the other types have finished. Quality and flavor fine. **10 for 60c, 25 for \$1.25.**

Klondyke. Delicious highly flavored berries. In California it ripens from April until July with two distinct pickings possible, one ripe immediately after the first. **10 for 50c, 25 for \$1.00.**

Rockhill. Everbearing type completely without runners. Rockhill has the finest flavor of all strawberries—berries large, and sweet. Bears large crops earlier and later than other types. **10 for \$1.50, 100 for \$12.00.**

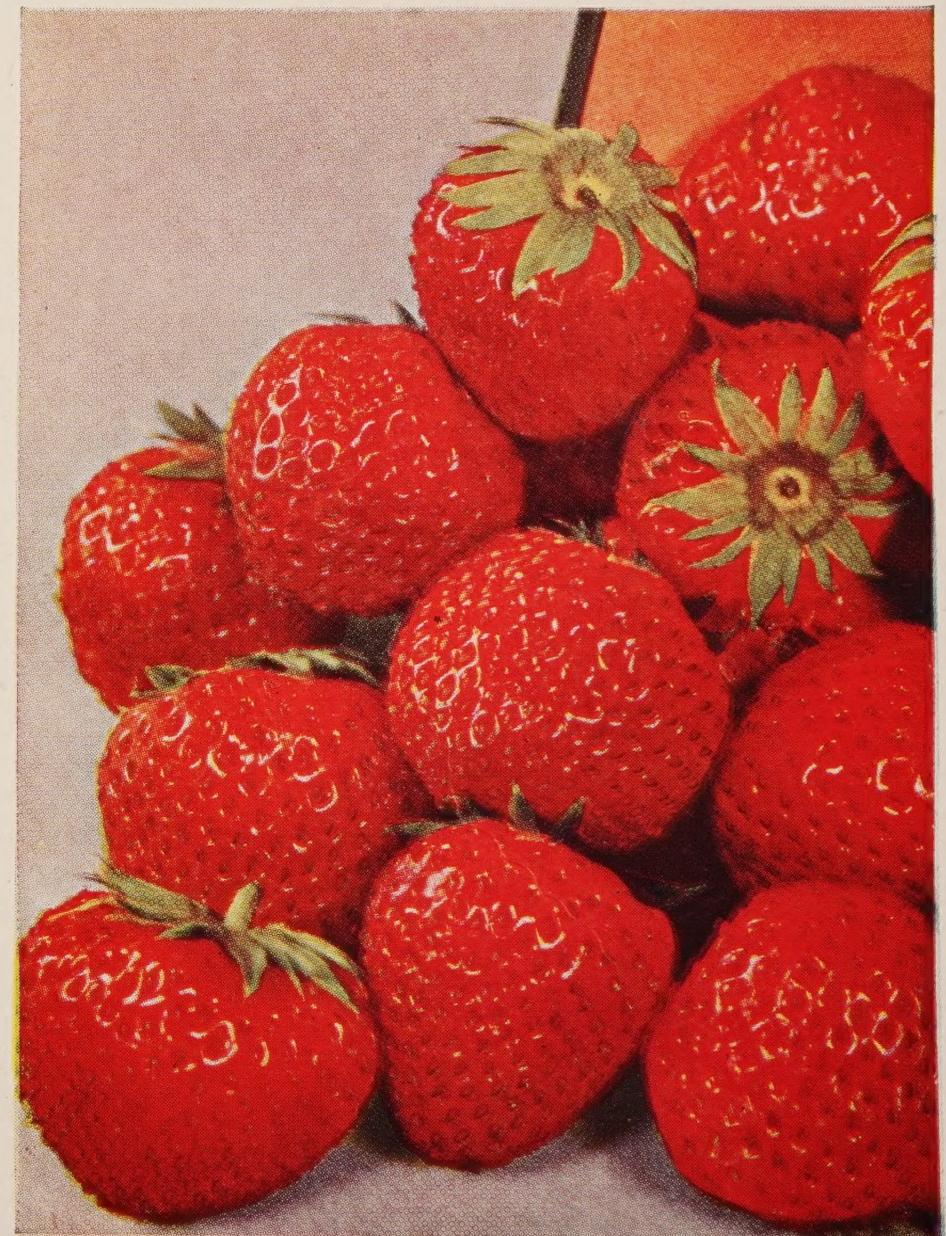

LOGANBERRY

Long, deep red berries, much longer than any other, with a rich flavor. Makes fine jams, jelly or preserves. Vigorous, hardy vines. Plant 4 to 6 feet apart. **Tips, 25c each, 10 for \$2.00.**

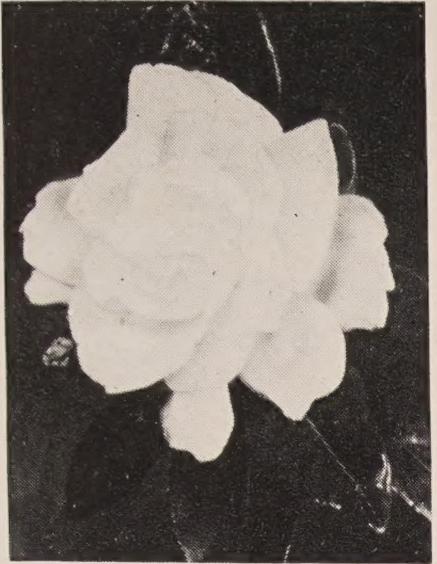

Thornless Loganberry. Like the Loganberry, but devoid of thorns and therefore, ideal for home planting. Vines vigorous and productive. **35c each, 10 for \$3.00.**

YOUNGBERRY

Berries ripen early—a rich deep wine color, changing to jet black, practically seedless and richly flavored. Vigorous heavy-bearing plants. Set 6 to 8 feet apart and give support of a trellis. **Tips, 25c each, 10 for \$2.00. Transplants, 30c each, 10 for \$2.50.**

Give Your Home... THE BLOOM OF YOUTH

Shrubs, like everything else, grow old. And
when they do, they age their surroundings
and rob them of their possible loveliness.

This is why you should periodically redecorate
your grounds the same as you do the rooms
in your house. Replace those "grown-out,"
scraggly shrubs with beautiful new ones. It
won't cost much, but what a difference it
will make. We have one of the largest
collections of Ornamental Shrubs in the West.

Come in and let us help you give new
beauty and charm to your home.

If addressee has removed and new address is known notify sender on
postage for which is guaranteed.

For proven quality buy Rosedale's pedigreed fruit trees

When you buy fruit trees be sure they are healthy and will bear large, delicious fruit year after year in generous quantities. And the way to be sure is to buy from Rosedale's. For here, every tree is personally selected, and carries a pedigree from the finest stock produced. Stock of which records of yield, flavor and consistency of bearing have been maintained for years. Look over the many varieties listed in this catalog and note their reasonable prices. Remember, you buy proven quality when you buy from Rosedale's.
